

DOCKET NUMBER
PROPOSED RULE PR 20
68FR09595

2575

109 Fawn Run
Alto, GA 30510
June 25, 2003

Secretary
U.S. Nuclear Regulatory Commission
Washington, DC 20555

Attn: Rulemaking & Adjudications Staff

Dear Staff:

I'm writing to urge the NRC to recommend that NO NUCLEAR WASTE be recycled into the marketplace or into local landfills or hazardous waste sites not equipped to take radioactive materials. This means that 0% nuclear waste should be allowed in cement, asphalt, frying pans, eating utensils, dental braces, agricultural land, playgrounds, etc.

Nuclear waste is, literally, too hot to handle. Putting it into items we use every day and places where we congregate would increase the death rate from cancer. We should contain nuclear waste on site wherever possible, not disperse it around the country.

Sincerely,

Emily B. Calhoun
