**Subject:** discussions on nuclear waste

2496

**DOCKETED  
USNRC**

**June 30, 2003 (3:14PM)**

**OFFICE OF SECRETARY  
RULEMAKINGS AND  
ADJUDICATIONS STAFF**

I have been against nuclear energy for a long time, and hence I am against having any nuclear waste to begin with... so of course think it should be disposed of with the utmost care. That is I think it should not be disposed of at all but contained in some manner to protect the environment and the public from it. Solid waste should be measured for degree of nuclear waste and ANY sign of nuclear waste on or within the item should mean that the item be contained and not discarded of as if it were normal trash and not used again. Within my house and my daily routines I am extrememlly careful with what contaminants I add to our environment and of what I dispose of. I use all natural cleaning products and fibers, I ride or walk almost everywhere, and I buy almost 100% organic food. I also have reduced my waste, reuse many materials in the school I work at or by giving them to a local charity, recycl! e everything I can and feed all my food scraps to my worms in my indoor worm compost. I just wish the government took as much care with their desicions not just about waste but about what produces that waste in the first place as well. Sincerely, Sara Jennings
