

6.30.03

To the Secretary of the NRC - **DOCKET NUMBER  
PROPOSED RULE PR 20  
608FR09595**

When I first heard of plans to phase radioactive materials into consumer products, I was incredulous. "Oh, come on," I said. "That sounds like some cooked-up, cooked-up hoax that gets bounced around on the internet." I was assured, however, that it was true, that the NRC was indeed considering such lunacy, and that the NRC was accepting public comments,

2617

So here's my comment: DO NOT DO IT!

The nuclear industry might cloak the proposal with assurances that only "low-level," "minimum," or "negligible" amounts will make their way into household products. DO NOT DO IT! Any amount is too much!

Please firmly reject any proposal that puts households, families, people in contact with ANY radioactive waste.

Sincerely,

Ben Tanner

(P.O. BOX 316
