DOCKETED
USNRC

August 14, 2003 (2:34PM)

OFFICE OF SECRETARY
RULEMAKINGS AND
ADJUDICATIONS STAFF

DOCKET NUMBER
PROPOSED RULE PR 20
(68FR09595)

2647

Template = SECY-067

SECY-02

To whom it may concern, Quote from an article written by Karen Charman, titled "Dumping on the Public".
"The NRC has begun the process of writing rules that could allow across-the-board deregulation of so-called low-level radioactive materials from aging nuclear power plants, weapons complexes and other facilities the agency licenses. These rules will determine what will happen to the metals, concrete, soil, plastics, chemicals, glass, paper and other items that become radioactively contaminated at nuclear facilities.....If this material is deregulated for unrestricted use, as the industry hopes, it will end up in everything from our knives and forks, zippers, the braces on our kids' teeth – even artificial hip joints and IUDs – to gardening tools, potting soil, building materials, furniture, computer equipment, and children's toys. In other words, it will be everywhere – unlabeled and unmonitored. "

I am very concerned about this policy direction. As a citizen I demand you send me information regarding current policy decisions so I can learn more about the NRC and the choices it is making regarding these materials. > Jonathan Hebert hebert_jonathan@hotmail.com
