Hancocks Bridge, NJ 08038

SUBJECT: MID-CYCLE PERFORMANCE REVIEW AND INSPECTION PLAN -  
HOPE CREEK GENERATING STATION

Dear Mr. Anderson:

On July 29, 2003, the NRC staff completed its mid-cycle plant performance review of the Hope Creek Generating Station. The mid-cycle review for Hope Creek involved the participation of all technical divisions in evaluating the performance for the first half of the calendar year 2003 assessment cycle. The process included a review of performance indicators (PIs) for the most recent quarter and inspection results over the previous twelve months. The purpose of this letter is to inform you of our assessment of your safety performance and our plans for future inspections at your facility so that you will have an opportunity to prepare for these inspections and to inform us of any planned inspections that may conflict with your plant activities.

Plant performance for the most recent quarter was within the Licensee Response Column of the NRC's Action Matrix, based on all inspection findings being classified as having very low safety significance (Green) and all performance indicators (PIs) indicating performance at a level requiring no additional NRC oversight (Green). Therefore, we plan to conduct only baseline inspections at your facility through September 30, 2004.

Additionally, in the annual assessment letter dated March 3, 2003, the staff identified a substantive cross-cutting issue in the area of problem identification and resolution (PI&R), particularly regarding instances of ineffective problem evaluations and untimely, ineffective corrective actions. In the recent mid-cycle assessment, we determined that this substantive cross-cutting issue continued to apply, based on the continuation of inspection findings and documented shortcomings within the PI&R area. These shortcomings continued to enable problems to recur and longstanding problems to go uncorrected. In a number of cases, poor implementation of maintenance work, insufficient coordination and work control, equipment reliability weaknesses, and engineering's deficient determinations of root causes were involved. The most noteworthy recent examples included a repetitive seal leak on an emergency diesel generator intercooler pump that resulted in a technical specification-required shutdown in June, a low power excursion during a reactor shutdown in March with an incorrect problem evaluation, and a recurring lubrication oil low pressure condition on the high pressure coolant injection (HPCI) pump in March.

We also note that the same overall corrective action program is concurrently implemented at both Hope Creek and Salem, and that both stations have continued to experience similar, continued adverse PI&R trends. This appears to indicate that any program improvement attempts have not yet been effective and that broadly based, site-wide improvements are still needed regarding PI&R performance at Hope Creek, as well as at Salem Units 1 and 2. We are aware that a site-wide reorganization is currently underway, in part, to improve organizational performance in this area. We plan to continue closely monitoring your performance in the PI&R area.

The enclosed inspection plan details the inspections scheduled through September 30, 2004. The inspection plan is provided to minimize the resource impact on your staff and to allow for scheduling conflicts and personnel availability to be resolved in advance of inspector arrival onsite. Routine resident inspections are not listed due to their ongoing and continuous nature. The inspections in the last six months of the inspection plan are tentative and may be revised at the end-of-cycle review meeting.

In accordance with 10 CFR 2.790 of the NRC's "Rules of Practice," a copy of this letter and its enclosure will be made available electronically for public inspection in the NRC Public Document Room or from the Publicly Available Records (PARS) component of NRC's document system (ADAMS). ADAMS is accessible from the NRC Web site at <http://www.nrc.gov/reading-rm/adams.html> (the Electronic Reading Room).

If circumstances arise which cause us to change the inspection plan, we will contact you to discuss the change as soon as possible. Please contact Mr. Glenn Meyer at (610) 337-5211 with any questions you may have regarding this letter or the inspection plan.

Sincerely,

**/RA/**

A. Randolph Blough, Director  
Division of Reactor Projects
