NRR is downloading the new web sit in order to access all the folders. Right now 10 folders exist vice the 1400 on the web site which is down.....so that sounds like the work should be simple.....NOT THE CASE.....The design and packaging of documents in the folders for NRCWEB303 is very different than before and I have been told to expect to find a large number of documents....Thus it will take awhile to strip NRCWEB303....What we in NRR do not understand is how the other offices could strip and access their folders so much quicker than us....I would not want to "rock the boat".....but NRR's computer people are of the belief that the others may not have been stripping the site and identifying all of their folders.....In the rebuild they need to do that as a minimum.....Z

P.S....Dennis please let me know when NRCWEB303 is placed on a new server.....Z
