Place: ADAMSIM

The NRR information review team recently reviewed NUREG-1738, "Technical Study of Spent Fuel Pool Accident Risk at Decommissioning Nuclear Power Plants," and determined that the report does not contain sensitive information and may therefore be released to the public. This is a document that had been re-profiled in ADAMS in Oct 01. I believe that the PDR forwarded my Bill Reckley, x1323) to you requesting that the document be put back on the public server. Our review was in response to a FOIA and we would like to refer the requester to ADAMS to retrieve the document. When the document is put back on the public server, could you please email me with the Accession Number (the existing file is ML010430066) or let me know if the accession number is the same as above.
