Subject: Plant status gets 53,000 hits

I just checked web usage statistics in response to a call from a reporter in southern Calif. There is a terrific page on the internal website with all manner of statistics.

<http://nrcweb.nrc.gov:82/public/web-stats.pl?all&Number%20of%20Hits%20for%20Home%20Page>

The Plant Status Report got more than 53,000 hits during the last week for which numbers are compiled. If we get a phone call for every information seeker who is now unable to get the plant status report, that's about 1,000 calls per day for each of us! Over that same week, our website got more than 1.7 million hits! I hope all those inquiries don't turn into phone calls as well.

Just thought I'd pass along some interesting numbers.
