April 7, 1953

Mr. James R. Mason  
Radioisotopes Branch  
U. S. Atomic Energy Commission  
Oak Ridge, Tennessee

Dear Mr. Mason:

We are enclosing completed Form AEC-313 in application for a renewal of our General Authorization 13863 which expires on June 30, 1953.

The membership of the Institutional Isotopes Committee consists of the same group as that submitted with the original application. The procedure for handling the proposed uses of radioisotopes remains the same as that established in our original correspondence. During the past year the Institutional Isotopes Committee has considered thirteen separate proposed uses for radioisotopes, one of which was rejected by the Committee due to the fact that its fabrication was considered to impose an undue health hazard and that the finished article did not comply with the requirements set up for such products.

We should also like to express our appreciation for the privilege of operating under this plan. It facilitates immeasurably the problems of procuring radioisotopes and enables us to render better service to our customers in considering the problems of their proposed uses.

We should like to report that Mr. Phillip M. Frazier of the Field Advisory Service visited this installation on April 1, and you will no doubt receive a report from him relative to our facilities.

Thank you very much for your consideration of this application for a renewal. Please call upon us if additional information is desired.

Very truly yours,

UNITED STATES RADIUM CORPORATION
