**Project Number 726
STD-ES-03-39**

October 29, 2003

Document Control Desk
U.S. Nuclear Regulatory Commission
Washington, DC. 20555-0001
ATTENTION: MS. L. C. FIELDS

SUBJECT: EXPLANATION OF ENCLOSURES

Dear Ms. Fields:

The enclosures in this package consist of the following:

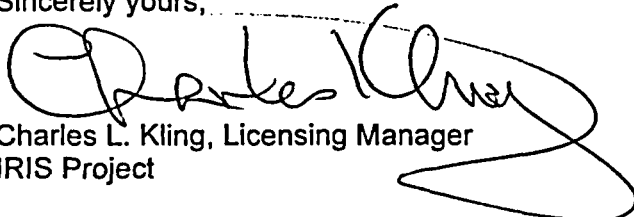

1. The signed, original transmittal letter (STD-ES-03-38) for WCAP-16082-NP-Vol. II. This topical is non-proprietary and completes the documentation the NRC needs to perform the IRIS near term review requested in STD-ES-03-31.
2. Signed transmittal letters and other previous correspondence related to the near term review of IRIS. All of these letters now have the Project Number 726 in the upper right of the first page.
3. A CDROM containing all the proprietary topicals and related, non-proprietary information (i.e., public papers and WCAP-16082-NP-Vol. II) needed by the NRC to perform the requested near term review.
4. A CDROM containing non-proprietary versions of all submitted material.

I have not included the affidavits referenced in the previous transmittal letters, because signed originals of all these affidavits have already been submitted.

Note that the CDROM containing the non-proprietary material consists of protected, image-only files with print permission, while the files on the proprietary CDROM are 1) book-marked 2) linked and 3) also allow copying of the text to facilitate your review.

Please contact me (860) 731-6604, if you have any questions concerning the enclosed material.

Sincerely yours,

Charles L. Kling, Licensing Manager
IRIS Project

D072

/Enclosures:

1. Signed, original transmittal letters for IRIS near term review material.
2. CDROM containing IRIS proprietary topical and related non-proprietary information
3. CDROM containing non-proprietary versions of all IRIS information submitted for near term review.
