

UNITED STATES
NUCLEAR REGULATORY COMMISSION

WASHINGTON, D.C. 20555-0001

~~SENSITIVE MATERIAL - NOT FOR PUBLIC RELEASE~~

October 13, 2001

MEMORANDUM TO: Mindy Landau, Communication Specialist
Office of the Executive Director for Operations

FROM: John A. Zwolinski, Director *[Signature]*
Division of Licensing Project Management

SUBJECT: NRR REVIEW OF NRC WEB SITE RELATED TO REACTORS FOR
SENSITIVE INFORMATION

Staff from NRR were tasked with reviewing the NRC WEB site related to reactors to identify documents or files that may contain sensitive information, using the guidelines provided by the Office of the Executive Director for Operations. These guidelines are attached, for completeness, in Attachment 1, "Lowered Threshold of Criteria for WEB/ADAMS Review 10/12/01." The staff involved in the review are listed in Attachment 2.

In performing this review, the staff identified over 32,000 individual documents contained in over 1400 WEB site folders. These folders are listed in the attached table (Attachment 3) along with a recommendation for those folders that we think should be removed from the NRC WEB site in the near term. The staff reviewed each of the folders against the guidelines. In planning our work it was immediately obvious that we could not review over 32,000 documents, thus we focused on each of the folders containing these documents.

The staff used a low threshold, as contained in the guidance, to recommend removing material. Referring to Attachment 3, the column "delete" was used when the staff determined that material in this folder clearly met the intent of the guidance provided. We recommend the folders in this category be removed from the WEB site for the foreseeable future. The column "comments" provide an abbreviated justification for removal of a folder.

We identified some folders, such as generic communications, NUREGS, and regulatory guides, to be deleted now, with the following caveat. The column "delete/rebuild" indicates that many documents in a given folder should be deleted, but that those folders contain a large number of documents that could be made available to the public via the WEB site. We recommend that the cognizant line organizations review this category of information in detail to determine the suitability for having the information available to the public on our WEB site, or to restructure the pages to remove sensitive information.

The last column contains the initials of the staff member that performed the review.

Y-3

~~SENSITIVE MATERIAL - NOT FOR PUBLIC RELEASE~~

The staff performing the review identified other insights for senior management:

- Rebuilding of the WEB site will require a thorough review of agency documents including a review of the folders that contain the links to other WEB sites. As an example, a SECY on SALP had a link to an NEI WEB site that contained security information.
- Identified organizations such as NEI and other government organizations such as DOE, EPA, and NIST appear to, or may, have potentially sensitive information on their WEB sites (based on our understanding of the guidance).
- There is complexity associated with the rebuilding of the NRC WEB site as our review revealed significant cross-linkages between offices, thus inter-office coordination and cooperation is of high importance.
- It is our understanding that a redesign effort is currently underway to enhance our external WEB site. Our review identified a number of administrative-type issues, such as empty folders and multiple spellings for folder names, that should be addressed during the redesign activities.

Dennis Lam, ONRR, will serve as the point of contact to interface with OCIO to implement the proposed changes.

~~SENSITIVE MATERIAL - NOT FOR PUBLIC RELEASE~~

LOWERED THRESHOLD OF CRITERIA FOR WEB/ADAMS REVIEW 10/12/01

Existing criteria for high-priority removal:

Documents that represent a "consolidation" of plant- specific information that might be used to exploit **site-specific** features including equipment and facility locations.

Additional criteria 10/12/01:

- Locations (even general locations) of the facility site.
- Physical vulnerabilities, potential weaknesses
- Construction details, including wall thicknesses
- Diagrams, schematics, cutaways all but very general layouts of plant designs
- Anything which describes how secure our plants are
- Information which could be used to defeat or breach barriers
- Information is a judgment call
