MEMORANDUM FOR: Files

FROM: Robert E. Browning, Acting Director  
Division of Waste Management

SUBJECT: MEETING WITH ROBERT MORGAN, U.S. DEPARTMENT OF ENERGY

On March 22, 1983, NRC's John Davis, Robert Browning, Hubert Miller, and Robert Wright visited Robert Morgan, DOE, at his office in the Forrestal Building. The purpose was to: (1) brief Mr. Morgan on the results of NRC's analysis of DOE's Site Characterization Report for the potential high-level waste repository site at Hanford, and (2) discuss future interactions between the DOE and NRC staffs leading toward a Site Characterization Plan (as required by the National Waste Policy Act of 1982).

The presentation regarding results of the NRC staff's analysis was given by H. Miller. It was pointed out that the analysis (NUREG-0960, "Draft Site Characterization Analysis of the Site Characterization Report for the Basalt Waste Isolation Project") was at the printer and would be available for distribution later in March. NUREG-0960 deals mainly with the NRC's analysis of the proposed site characterization program described by DOE in its site characterization report. The NUREG provides guidance to DOE that should be useful as DOE works toward completion of its Site Characterization Plan for the Hanford site in the fall of 1983.

With respect to ongoing staff interactions, Mr. Morgan supported the need for ongoing technical exchanges as a follow-up of the NRC staff's analysis. He also indicated that NRC would have complete and prompt access to data.
