SUBJECT STATUS OF BWIP HYDROLOGY DATA REVIEW			WM File 101 H.	

**SUMMARY**

In response to information from F. Robert Cook, NRC's BWIP OR, I contacted Mr. Mecca to inquire about the status of the BWIP Hydrology Data Review planned for the first week of December 1986. Mr. Mecca informed me that Dr. Dahlem stated that DOE-RL could not support the data review because it would interfere with DC-24/25 restart activities. Rather than in early December, DOE-RL now proposes convening the data review after the NRC-DOE Hydrology Testing Strategy Meeting, which may occur in January or February of 1987. I told Mr. Mecca that NRC desired to have the data review before the strategy meeting. In addition, I stated that the data review would not likely interfere with restart activities because all DOE needs to do is provide access to the hydrologic data for NRC staff and contractors. It appeared to me that DOE was attempting to delay further NRC's access to hydrologic information that is being used by DOE to develop the BWIP SCP and testing strategy for hydrology.

We mutually decided to schedule a conference call on Monday, October 20, at 11:00 (Eastern time) to allow DOE to explain its reasons for further delaying the data review.

**ACTION REQUIRED**

Conduct conference call; inform WMGT and WMRP management about outcome.
