ADVISORY COMMITTEE ON REACTOR SAFEGUARDS  
WASHINGTON, D. C. 20555

86 NOV 13 1986

MEMORANDUM FOR: Wayne Walker, DWM  
FROM: Sidney J.S. Parry, ACRS Senior Fellow  
SUBJECT: Requested BWIP Borehole Information

Thank you for fulfilling my request for information on the recent drilling activities at BWIP. Summarizing the data it appears that my suspicion, that the rate of surface based characterization is decreasing, is confirmed in contradiction to the USGS recommendations. From your table I note that 15 holes were drilled in 1983, 9 in 1984, 1 in 1985 and 9 in 1986, with one still underway.

Your tables did not list final depths of the boreholes or provide information on the results of these tests. Further, while I have a good idea where the proposed site is located, the map that you provided did not indicate the site and is of limited use to less familiar people. Provision of this information would be appreciated.

As I mentioned in our meeting, a uncharitable person might conclude that the reduced exploratory activity is a result of a desire not to find out anything unfavorable. That is not my position, but I believe that an explanation of why the USGS recommended tests were not made and why there has been a major reduction in drilling activity over the past three years is justified.

SELECT COMMITTEE ON  
AGING

August 20, 1987

Mr. John C. Layton  
Inspector General  
United States Department of Energy  
Washington, DC 20585

Dear Mr. Layton:

The enclosed letters from the Basalt Waste Isolation Project files raise a serious question in our minds whether an attempted cover-up of information of the sort alleged in Investigation No. I85RL002 might have occurred in 1986.

We are frankly surprised that your report on the case, closed well after these letters were written, did not discuss the first letter or its author's views on the DOE policy at issue.

We hope you will agree that further investigation into the matter is in order.

Sincerely,

RON WYDEN, M.C.

  
AL SWIFT, M.C.
