Statement**STATEMENT OF WORK FOR GEOPHYSICAL TECHNICIAN**of
Work

The position support the performance of geophysical fieldwork. Geophysical survey techniques will include electrical resistivity, induced polarization, transient electromagnetic, magnetic, ground conductivity, and differential global positioning. An understanding of basic electronics is required. Fieldwork will entail supporting the conduct of the geophysical surveys, including but not limited to equipment setup, data collection, and equipment transport. Some travel may be required. All work will be performed under supervision of a CNWRA technical staff member.
