BASALT WASTE ISOLATION PROJECT DESCRIPTION

In February 1976, the U.S. Energy Research and Development Administration, currently the U.S. Department of Energy (DOE), established the National Waste Terminal Storage (NWTS) Program to provide multiple repository facilities in various deep geologic formations within the United States for the terminal storage of nuclear waste. The Columbia River basalts beneath the Hanford Site were among those geologies selected for initial study and characterization.

In July 1978, the NWTS Program was restructured and expanded to develop the technology for mined geologic disposal of nuclear wastes. As part of the NWTS Program, the Basalt Waste Isolation Project (BWIP) was established with an objective to assess the feasibility of disposal of commercial radioactive spent fuel/high-level waste in deep geologic formations in basalts beneath and within the Hanford Site. The BWIP is currently managed by U.S. Department of Energy-Richland Operations Office (DOE-RL). Rockwell Hanford Operations (Rockwell) is the prime contractor responsible for technical management of this work.

The Nuclear Waste Policy Act of 1982 has established a schedule for identifying candidate repositories and charged DOE to prepare guidelines for selection of a recommended site for the repository. The BWIP mission and objectives have been formulated to meet these criteria.

The mission can be expressed in terms of meeting three subordinate objectives; namely, the documentation of:

- Technical feasibility
- Societal acceptability
- Economic feasibility.

The BWIP is organized into major elements of work consistent with the NWTS Program Work Breakdown Structure (WBS). Nine Tasks are included in the WBS for NWTS projects (Fig. 1). The BWIP has broken down these Tasks into end functions that comprise the major elements through which the BWIP is managed.

The BWIP activities within this WBS are directed toward developing the necessary information to:

- Ascertain the viability of using the basalts beneath the Hanford Site as a nuclear waste repository (Site End Function responsibility)

BASALT WASTE ISOLATION PROJECT

RECORDS MANAGEMENT

SYSTEM DESCRIPTION

Introduction

The Basalt Waste Isolation Project (BWIP) has implemented a comprehensive records management system to control all project documentation. The system is described in detail in BWIP Document SD-BWI-AP-001. The system is summarized below to help program participants understand the organization of BWIP documents, the retrieval capability available to access them, and the manner in which they are stored. This information will assist program participants in defining their initial retrieval requirements and best utilize BWIP resources to meet their information needs.

System Description

The BWIP Records Management System is defined in two ways; first, there is a comprehensive list of all document types generated or received by the project. Secondly, for each type of document there are specified processing requirements which are to be completed. The intent of the system is to secure a comprehensive collection of all documents describing how the BWIP conducted its work, and to maintain this collection in a manner meeting the requirements of ANSI/ASME Standard NQA-1, Supplement 17S, DOE Policies and Directives and DOE Technical Information Center requirements.

Responsibility for processing documents is assigned to a single organization on the project, the BWIP Records Management Center. This group completes the following tasks for each project document:

- Each document is reviewed to ensure it is legible and complete. Each document is checked to ensure it can be microfilmed.
- Each document is registered in the Records Retention Data Base.
- Documents are filmed. The filming is accomplished by Rockwell Hanford Operations (Rockwell) site services, and done in accordance with applicable National Micrographics Association Standards. After inspection, the microfilm is defined as the official project copy.
- The film is stored in a facility meeting the requirements of ANSI/ASME Standard NQA-1, Supplement 17S. The hard copy is disposed of as appropriate.

Physical samples, computer tapes and other unique items created by the project are processed for retention in a similar manner appropriate to their requirements.

The orientation of this system is archival. The Records Management Center processes one copy of each document as described above. Other duplicate copies are utilized within the various project organizations. These work

- Develop waste package design requirements and designs to ensure that waste packages emplaced in a repository located in basalt meet regulatory criteria (Waste Package End Function responsibility)
- Develop the technology and design for constructing, operating, and decommissioning a nuclear waste repository in basalt (NWRB) (Repository End Function responsibility).

Remaining BWIP and functions within the WBS support the above activities by providing systems technologies, a regulatory framework, program management support, and test facilities for conducting research and development work.

copies are not processed or controlled by the Records Management Center unless they are modified or changed. If they are, the revised document is processed as a unique issue by the Records Management Center.

In addition to the system summarized above, there are two related activities performed for project data. First, current revisions of all engineering data (e.g., design drawings, specifications, etc.) are listed in the Rockwell Engineering Release System. There is an index of these documents which is accessible through a distributed network of terminals. Its purpose is to ensure that all personnel involved in engineering, construction, or maintenance utilize only current data for their work. The Engineering Release System has no archival data (which for BWIP is in the Records Retention Data Base).

A second auxiliary system is the Core Retention Program, which is an inventory of all physical samples extracted from the various exploratory wells. Because of their unique indexing and inventory maintenance requirements, these are controlled separately from project documents.

Impact on Retrieval

The heaviest utilization of BWIP data occurs within the project organizations accessing copies of the documents which have been processed for archival retention by the Records Management Center. Other extensive usage has fallen on the Engineering Release System for engineering data. Consequently, the Records Retention Data Base was seen primarily as an archival inventory control log, and not as an interactive retrieval service. The establishment of the Public Release System will change this definition and BWIP is committed to enhancing retrieval capabilities available for its documents. While this is underway, the limitations in system retrievability which might be experienced by program participants will be alleviated by designating project individuals to serve as information resources in assisting users to find the data they desire. This is described in detail in the Public Release System description.

The archival orientation of the system will impact users who request large volumes of documentation because many of these records must be reproduced from microfilm.

Summary

The BWIP Records Management program has been developed to ensure complete compliance with regulatory standards for Records Retention. It is currently being enhanced to additionally respond to the needs of program participants for access to project data. During the installation of the Public Release System users may have to contact project personnel to meet all their needs. The BWIP is committed to ensuring all program participants receive all the data they require to meet their individual goals.

PUBLIC RELEASE SYSTEM SYSTEM DESCRIPTION

Introduction

The Basalt Waste Isolation Project (BWIP) Public Release System (PRS) is intended to provide program participants with all documents and data necessary to monitor and participate in the BWIP characterization and design process. The PRS also provides public access to BWIP documents and data. The initial focus of PRS activity has been to provide a comprehensive listing of BWIP documents arranged by BWIP work activity. This is provided in a report called the PRS Document Accession List. The design of the PRS has not been finalized. The BWIP is currently using its archivally-oriented records management system to generate PRS Document Accession lists. This system will be enhanced to provide for greater retrievability of documents in the future.

PRS Scope

Document Types Included

The BWIP PRS is limited to documents or data developed by the BWIP. Documents used by BWIP which originate with other organizations that are not project specific, e.g., ANSI or ASME standards, U.S. Department of Energy publications, National Waste Terminal Storage (NWTs) reports, etc., should be requested from such organizations directly. The BWIP will assist requestors by providing addresses of these originators, but cost consideration and copyright and patent restrictions prevent BWIP from reproducing or distributing them.

The BWIP has developed the following list of types of documents which are included in the PRS:

- Computer Data Tapes
- Computer Programs Developed for BWIP
- Conceptual Design Reports/Plans
- Core Test Reports
- Criteria Documents
- Data Books
- Data Packages
- Design Calculations
- Design Drawings
- Detailed Design Reports
- Drilling Shift Record
- Emergency Plans
- Engineering Notebooks*
- Engineering Studies
- Environmental Assessments

* Engineering Notebooks are scheduled to be indexed and filmed in 1984. They have not yet been processed by the BWIP Records Management Center and are currently administered by appropriate site personnel.

Formal Reports
 Functional Design Criteria
 Geophysical Logs
 Health & Safety Plan Support Documents
 Maps (geologic/hydrologic)
 Procedures Manuals
 Project Plans
 Requirements Documents
 Safety Analysis Reports
 Site Characterization Document/Reports
 Specifications
 Speeches & Articles
 Stress Analyses

Subcontractor Data/Reports
 System Description Documents
 Technical Assessment Support Documents
 Technical Information Support Documents
 Technical Plans
 Test Plans & Procedures
 Test Reports
 Trade Studies
 Verification Plan Support Documents

The inclusion of a document type does not ensure there is any occurrence of it in PRS, for example BWIP has not yet filmed the Engineering Notebooks (scheduled for second quarter 1984).

Document Issuances Included in PRS

For all document types listed above, each issuance and subsequent revision is included in the PRS. Except in extraordinary circumstances, they will be added to the Document Accession List within 30 to 45 days. The initial PRS Accession List includes only the current revision of design drawings and the change documents pending against the current revision. Superseded drawing revisions will be included in a later issue.

Data and Physical Samples

In addition to the access to documents described above, program participants may also utilize project physical samples, data tapes, etc. These items are listed in the PRS index in the same manner as the documents from the Records Retention data base except for core samples. A separate listing of core samples is maintained by the BWIP.

Program participants requiring access to documents or data which is not included in a PRS index are requested to contact a BWIP PRS representative in the applicable end function for assistance. The BWIP is committed to providing access to all data/documents required by program participants.

PRS Description

General responsibility for records processing for BWIP is assigned to the Records Management Center. The staff receives copies of all documents originated by the project or received by the project from other organizations. Documents are indexed for retrieval in the Records Retention data base, and then filmed for archival retention.

On a monthly basis a listing of documents which are included in the PRS are generated from the Records Retention data base. One copy of this list is placed with the U.S. Department of Energy Reading Room for use by the public. Other lists are directly forwarded to program participants. In addition to the listing generated from the Records Retention data base, a listing of core samples is also generated.

Public Access

Individuals not affiliated with a program participant may have access to BWIP records by going to the U.S. Department of Energy Reading Room and reviewing the PRS listing. Copies of documents on the listing will be furnished upon request. Requests for documents or data not itemized on the list will be considered in a timely manner on an individual basis by the BWIP Public Affairs Office.

Access by Program Participants

Program participants will receive their own listing of PRS documentation. The listing will be updated on a monthly basis. Program participants can request copies of documents itemized on the PRS listing by calling the BWIP Program Participant Document Representative. If program participants require documents or data not on the PRS list, they may contact the PRS representative in the appropriate project organization for assistance. The BWIP is committed to providing program participants with all the documents/data required by them to monitor and participate in the characterization design process.

PRS Document/Data Distribution

Program participants will be given copies of documents in the format requested. Because film will be utilized for retrieval of documents, participants are encouraged to utilize this media whenever possible, especially for drawings and maps. Distribution of documents will be initiated immediately upon receipt of a request; processing time will be dependent upon volume and types of requests.

Distribution of physical samples and computer tapes will be governed by slightly different criteria which reflect the unique, and often, irreplaceable nature of these items. The BWIP consequently requests that participants requiring such materials contact the BWIP PRS Representative in the appropriate project organization directly to utilize these items.

Status of PRS

The PRS has been developed utilizing existing BWIP resources. The most important goal of the initial PRS activities was to provide program participants with an accession list so they may have access to BWIP documents and data. The BWIP believes an augmented PRS will be required and has identified the following areas where it believes improvements should be made:

- Provide for retrievability by broad subject category (e.g., geology, performance assessment, engineering design) in addition to work breakdown structure
- Provide augmented document descriptions
- Provide for detailed subject indexing of selected document types
- Provide for more flexible report generation.

Program participants will be advised as these enhancements are made available.

BASALT WASTE ISOLATION PROJECT
PUBLIC RELEASE SYSTEM
HOW TO USE THE ACCESSION LIST AND
REQUEST DOCUMENTS

General

The Basalt Waste Isolation Project (BWIP) Public Release System (PRS) Accession List identifies all BWIP documents which are readily available to the public and program participants. The accession list is arranged by BWIP end function organization. These are listed in Figure 1. Following the lists of the documents for all the functions is a list of all core samples which have been collected.

- Document Accession List

The list of documents for each end function is generated from the BWIP Records Retention data base. It is sorted by document type. Within each document type, documents are listed by document identification number and date of issuance. The document types included in the PRS are indicated in Figure 2.

The listing of core samples is sorted by shaft number. Within each shaft, core is arranged by box number which corresponds to a segment of the shaft as described for each box.

- End Function PRS Representative

Should a program participant not be able to identify documents needed from the information provided in the Accession List, he/she should contact the end function PRS Representative most responsible for the area of interest. These individuals are identified in Figure 3. They can provide assistance in using the list, respond to questions regarding use, status or interpretation of documents, and in general, ensure that BWIP is completely responsive to all information needs of program participants. Members of the public not affiliated with a program participant should address requests for additional assistance to the Hanford Science Center, Department of Energy Reading Room.

Requesting Copies of Documents - Program Participants

After identifying which document(s) is needed, a program participant either calls the BWIP Program Participant Document Representative, phone (509) 376-7092, or completes a document request form (sample with complete instructions in Figure 4.)

The Form should be sent to:

Basalt Waste Isolation Project -
Public Release System
Rockwell Hanford Operations
1135 Jadwin Avenue
Richland, Washington 99352

Program participants requesting more than ten different documents at a time are requested to contact the Program Participant Document Representative to determine if there is a backlog of requests and to ensure BWIP has sufficient notice so it can be as responsive as possible to the needs of others for documents.

Requesting Access of Physical Samples and One-of-a-Kind Records - Program Participants

Program participants requesting access to core samples, photographs, computer tapes, radiographs, etc., which cannot be readily duplicated or which are unique, must complete a document request form for the item using the "comment" space to describe it. The form will be processed by the appropriate end function who will contact the requestor to negotiate how the project can respond to his/her needs.

Requesting Copies of Documents - Public

Members of the public may request copies of documents on the BWIP PRS Accession List through the Hanford Science Center, Department of Energy Reading Room in Richland, Washington, telephone numbers (509) 376-8583 or (509) 376-6374. Production of copies and distribution are subject to Department of Energy policies and procedures.

**Instructions for Completing
Document Request Form**

General

A separate Document Request Form (DRF) should be completed for each document requested. If a large number of documents is requested program participants may alternatively photocopy the list of documents from the PRS Document Accession List, and attach the photocopies to a DRF. Program participants may obtain DRF's from the Program Participant Document Liason (509) 376-9092. Only documents identified in the PRS Document Accession List may be requested on the DFR. For materials requested which are not on the PRS Document Accession List the PRS representative (listed on Figure 3 of this procedure) must be contacted. Only program participants may use the DRF. All other individuals should contact the U.S. Department of Energy Public Reading Room for assistance.

Completing the Form

Document Type	This is indicated in the top left corner of each page of the Document Accession List.
Document Number	Where documents have been assigned unique identification numbers, this is indicated in the first column of the Document Accession List. If a document does not have a number please write "N/A" in this space.
Document Revision	Indicate revision of document. If the requestor wants the most current revision enter "Latest." If a requestor asks for a superceded revision the copy will be stamped "superceded revision" to ensure he is aware that more current data is available.
Document Date	Enter date of document.
Document Title	Enter document title/description.

Figure 4
(continued)

Record Number	The record number is the computer address of the index record for the document. It facilitates retrieval of the document by the BRMC personnel.
Cartridge/Frame Number	This is the microfilm address of the document. On the Accession List it is indicated below the Record Number. It is composed of two Four-digit numbers separated by a slash.
Accession List Date	The month and year of the Accession List appears at the top of each page.
End Function	The BWIP End Function appears beneath the document type at the top right of each page. Either the description of the End Function, (for example "systems") or the code for it which appears after the description, "L1" can be used.
Page Number	The page number where the record is listed.
Requestor Name	The name of the requestor.
Organization	The name of the program participant with which the requestor is affiliated.
Address Telephone Number	The address and telephone number of the participant requesting the document.
Comments	To be used when requesting materials which are not documents. This space may also be used for special instructions regarding document media, shipping, etc.
Date of Request	Date the form is submitted to the BWIP PRS.
