NRC ESTABLISHES WEB PAGE FOR INFORMATION ON CURRENT TECHNICAL ISSUES AT VERMONT YANKEE

The Nuclear Regulatory Commission has established a page on the agency's Web site to consolidate information on technical issues at the Vermont Yankee nuclear power plant, including Entergy Nuclear's application to increase the plant's power output by 20 percent.

The page includes correspondence both to and from the NRC concerning the uprate, spent fuel pool inventory and other issues. Links on the page provide information on issues such as public meetings and opportunities for public participation in the uprate review process. The page also includes a link to the NRC's review standard for extended power uprates. Information on other technical issues at Vermont Yankee will be added to the page as necessary.

The page's address on the NRC web site is:

<http://www.nrc.gov/reactors/plant-specific-items/vermont-yankee-issues.html> .
