## 2.6 REGIONAL HISTORIC, ARCHAEOLOGICAL, SCENIC, CULTURAL, AND NATURAL FEATURES

### 2.6.1 The Site and Vicinity

A total of 18 properties located within 10 km of Millstone 3 are listed on the National Register of Historic Places and are identified in Table 2.6-1. (Shannahan 1982; U.S. Department of the Interior 1979-1981). None of these properties is located in the town of Waterford. Properties that have been declared eligible for the National Register by the Secretary of the Interior are also in Table 2.6-1. A letter from the Connecticut State Historic Preservation Officer identifying these properties is provided in Attachment 2.6A. A listing of properties on the State Register of Historic Places throughout the towns within the 10-km radius is provided with the letter.

According to the State Historic Preservation Officer, little information on archaeological site density and distribution is currently available (Shannahan 1982). Although coastal areas and major drainage systems are potential locations for prehistoric archaeology, it is the opinion of the State Historic Preservation Officer that historic, architectural, and archaeological resources will not be affected by the operation of Millstone 3 (Shannahan 1982).

No sites or areas listed on the National Register of Natural Landmarks are within 10 km of Millstone 3. (U.S. Department of the Interior 1975, 1976, 1979, 1980).

Areas on the State Natural Areas Inventory within 10 km are identified in Table 2.6-2 (Telecon, Ellis 1982). The closest is located more than 4 km from the site, and none is expected to be affected by station operation.

Millstone 3 is not expected to have any significant visual effect on the surrounding area. Topography and vegetation screen or block views of the station from most land areas within 10 km. As determined by line-of-sight studies and field reconnaissance, views of Millstone 3 are limited to shoreline areas of Niantic Bay and Pleasure Beach and nearby waters of Long Island Sound. In addition, since Millstone 1 and 2 are generally visible from those areas from which Millstone 3 is visible and because Millstone 3 is an addition to an existing power generating complex with an established industrial character, it will not change the visual character or quality of the area.

### 2.6.2 Transmission Line

The transmission line for Millstone 3 was reviewed by the State Historic Preservation Officer (SHPO) in connection with the preparation of this report and as part of the transmission line route certification by the State.

The only sites listed or determined to be eligible for listing on the National Register of Historic Places that are near the route are found in the Lebanon Green National Register Historic District, located in New London County, Conn., some 457 meters (1,500 feet) east of the route. This historic district was placed in the Register in June 1979. It contains the birthplace of John Trumbull, a national historic landmark listed in the National Register since 1966; the William Williams House, a national historic landmark listed in the National Register since 1971; and the War Office, listed in the National Register since 1970 (Shannahan 1982; 44FR7440-3; 45FR17495-6; 45FR17450; 46FR10671; 46FR10626; 47FR4920; 47FR4933). As seen from the historic district, it is expected that the transmission line will have sufficient back drop far enough away so as not to be readily distinguishable in the landscape. It is not expected to have a significant visual effect on these resources (Shannahan 1982).

In addition to the above, certain segments of the route for the power line cross or come near five locations whose environmental characteristics suggest a potential for the existence of prehistoric archaeological resources, as well as four architectural resource areas identified by the SHPO for their potential architectural significance (Shannahan 1982). The order issued by the Connecticut Siting Council (CSC) certifying the route and facility for this line (CSC Docket 25, June 4, 1982), requires that a detailed right-of-way development and management plan be approved by the CSC prior to line construction. In response to the SHPO request (Shannahan 1982), the CSC required as part of its order that the same plans be submitted to the SHPO so that he may comment prior to CSC approval. Plans are now being prepared for this purpose and it is expected that the review will be completed by the fall of 1983.

The transmission line does not cross any area listed on the National Register of Natural Landmarks (US Dept. of the Interior 1979).

Subject: Data Request - Erols Section 2.6  
Millstone Nuclear Power Station - Unit 3  
Northeast Utilities Service Company

Dear Mr. Liang:

With respect to your request for information as to the architectural, historical and archaeological resources located within 10 km of Millstone - Unit 3, the following data are provided.

The following properties are listed on the National Register of Historic Places:

East Lyme	Thomas Lee House Thomas Avery House Samuel Smith House	CT 156 & Giant's Neck Road Society Road 82-Plants Dam Road
New London	Barns, Acors, House Deshon-Allyn House Fort Trumbull Hempstead, Joshua, Hse. Hempstead, Nathaniel, House Monte Cristo Cottage New London County Courthouse New London Custom Hse. New London Public Library New London Railroad Station Shaw Mansion Thames Shipyard Whale Oil Row William Memorial Inst	68 Federal Street 613 William Street Fort Neck (HAER) 11 Hempstead Street Corner of Jay, Hempstead, Coit, and Truman Streets 325 Pequot Avenue 70 Hunting Street 150 Bank Street 63 Huntington Street State Street 11 Blinman Street Farnsworth Street 105-119 Huntington Street 110 Broad Street

STATE HISTORIC PRESERVATION OFFICER: The person responsible for implementation of the National Historic Preservation Act of 1966 administered by the Department of the Interior, Heritage Conservation and Recreation Service, Washington, D.C.

AN EQUAL OPPORTUNITY EMPLOYER/AFFIRMATIVE ACTION AGENCY

January 5, 1981

The following properties have been declared eligible for the National Register of Historic Places by the Secretary of the Interior:

East Lyme	Niantic River Railroad Bridge	Crosses Niantic River (HAER)
	Niantic River Highway Bridge	Crosses Niantic River (HAER)
Groton	Groton Bridge	Over Thames River (HAER)
New London	Old Town Mill	Mill & State Pier Sts.
	Shaw's Cove Bridge	Over Shaw's Cove (HAER)
	Starr Street Area	-
	Bank Street Historic District	-
	Ledge Lighthouse	New London harbor
	Franklin Street Historic District	-
	138-48 Huntington Street	-
	St. James Episcopal Church	125 Huntington Street

Please find enclosed the appropriate pages from Historic Preservation A Plan for Connecticut. Vol.II: An Inventory (Connecticut Historical Commission, 1974), which identifies architectural and historical resources within the area. In addition, properties identified by The Historic American Engineering Record as possessing engineering or industrial significance have been annotated with "HAER".

Further, please find enclosed the relevant zerox sections of a "scan" survey which this agency undertook in order to preliminarily identify potentially significant clusters of architectural resources. Minimal descriptive documentation exists to supplement this graphic data.

In general, as no systematic survey of Connecticut's archaeological resources has been accomplished to date, little information exists as to actual archaeological site density and distribution. However, coastal areas and major river drainage systems, such as, the Niantic River - Niantic Bay confluence, are especially sensitive with respect to the existence of prehistoric archaeological resources. In particular, the enclosed survey data should be of assistance; The State Historic Preservation Officer requests that the specific locational data for archaeological resources be treated in a confidential manner in accordance with Connecticut Public Act 81-286 in order to ensure continued preservation of these resources.

It should be realized that the above provided information represents an incomplete inventory of the architectural, historical and archaeological resources within the defined area.

In the opinion of the State Historic Preservation Officer the granting of an operating permit for Millstone Nuclear Power Station Unit 3 will have no impact upon historical, architectural and archaeological resources either listed on or eligible

Mr. H. C. Liang

John W. Shannahan, State Historic Preservation Officer, Connecticut  
Historic Commission, Hartford Conn., to R. deBrigard, Northeast  
Utilities Service Company, Hartford, Conn., January 19, 1982.

*Office of the*  
**STATE  
HISTORIC  
PRESERVATION  
OFFICER**

*for Connecticut*

---

59 SOUTH PROSPECT STREET - HARTFORD, CONNECTICUT 06106 - TEL: (203) 566-3003

January 19, 1982

Mr. Raul de Brigard  
Supervisor, Land Planning Unit  
Transmission Engineering & Construction  
Northeast Utilities  
P.O. Box 270  
Hartford, Connecticut 06101

Subject: Millstone-Manchester  
345kV Transmission Line

Dear Mr. de Brigard:

The State Historic Preservation Officer has reviewed Northeast Utilities' application to the Connecticut Siting Council with respect to the above named project. This Office's comments are provided in accordance with the National Historic Preservation Act of 1966; Advisory Council Guidelines 36 CFR 800; the Connecticut Environmental Policy Act, Section 22a-1a-3(a)(4), and Sec. 10-321(b)(13).

In general, the State Historic Preservation Officer expects that the selected alignment route for this proposed transmission line appears appropriate in light of cultural resources and environmental data. With respect to construction-specific effects of this proposed project, the following comments are provided.

The following data is keyed to the segment maps provided as part of Volume II of the report entitled "Report Submitted with Application for 345kV Transmission Line Between Millstone Point in Waterford and Manchester" (Northeast Utilities System Companies 1981). In the opinion of the State Historic Preservation Officer, no cultural resources exist within the extant alignment for segment Nos. 3, 4, 5, 9, 11, 13, 14, 16, and 17. The alignment within Segment 10 is located approximately 1500 feet west of the Lebanon Green National Register District;

2.6B-1

Mr. Raul de Brigard

Page 2

a copy of the documentation of this area is enclosed for your information. Within Segment Nos. 1, 8, 15, and 18, this Office has preliminarily identified areas with potential architectural significance. Annotated maps are enclosed which provide boundaries for these potentially significant architectural areas.

The alignment route with Segment No. 19 appears to be in immediate proximity to an early 19th Century architectural structure located on Bidwell Street, which is listed on the State Register of Historic Places.

In addition, Segment Nos. 1, 2, 6, 7, and 12 contain environmental characteristics which suggest a potential for the existence of prehistoric archaeological resources.

The areas in question are identified on the attached documentation.

This Office understands that no cultural resources will be directly impacted by the proposed alignment. This Office recommends that Northeast Utilities consider the above listed cultural listed resource data as part of its design planning in order to minimize the visual characteristics of any proposed structure within a potentially significant architectural area. In this regard, this Office would appreciate the opportunity to review and comment upon specific plans for all segments for which potential resources have been identified. This opportunity to review further plans should be provided prior to the field construction of any site specific activity.

This office appreciates the opportunity to have reviewed and commented upon this proposed project.

This comment updates and supercedes all previous correspondence for this project.

For further information or technical assistance, please contact Mr. David A. Poirier, Archaeologist.

Sincerely,

  
John W. Shannahan  
State Historic Preservation  
Officer
