Appendix B. Telephone Survey Script

The telephone survey described in Section 2.3 was conducted in order to provide data not available from the U.S. Census Bureau or other sources. Specifically, the survey provided estimates of vehicle occupancy and estimates of time lags between emergency notifications and the start of evacuation trips.

A total of 900 telephone surveys were conducted. This is an increase from 700 surveys conducted as part of the 1992 evacuation study. The distribution of calls was stratified according to population density. Zip code areas (ZTCAs) were obtained from the Environmental Systems Research Institute⁶ and overlaid on the EPZ map. The ZTCA encompassing the EPZ map were selected and the population in each zip code was tabulated. The number of calls from each zip code was based on the percentage of total population.
