

ESBWR Regulatory Treatment of Non-Safety Systems

Kathy Sedney – GE
ESBWR Preapplication Meeting
October 12-13, 2004

RTNSS Process

- The RTNSS process is defined and includes:
 - > Identification of the significant nonsafety-related SSCs
 - > Development of specific R/A missions for the significant nonsafety-related SSCs.
 - > Specification of proposed regulatory treatment for each of the missions developed (e.g., in the maintenance or procurement areas)
- GE expects that some ESBWR nonsafety-related SSCs will be identified as RTNSS important

RTNSS Documentation

- A separate Licensing Topical Report will contain the detailed results of the RTNSS Implementation Evaluation
- The RTNSS results will be summarized in DCD Tier 2 Section 3.2
