TEL: (301) 415-1277

cc: Paul H. Lohaus, Bob Bores, et al.

Hi Aaron,

I appreciate NRC asking for state input on this "Hazardous Scrap - Beware" and Draft Public Brochure. Via this e-mail, I'm forwarding them to other PaDEP BRP folks for review and comment.

My input, first thought is, the poster is way too busy. In fact, I'd say page two of the brochure would be all you need. It says it all. I've printed one, done a few suggested edits, scanned, and attached it for your consideration. However, the one strong comment I would make is, do it generic for scrap yards and solid waste facilities, e.g., landfills and incinerators. We're finding many many more sources at landfills vs. scrap yards these days.

Lastly, I would ask that you make your documents "open" and not pdf when you distribute finals. That way the states can edit if they want or just add their contact info, and then transmit electronically. In fact, if you give me page two of that brochure in Word or ppt, we'll give you credits and have on the street pronto!

Thnx,

Dave

BACKGROUND

Each year, a number of radioactive items are lost, stolen, or abandoned. Some of these items are recovered by law enforcement personnel or members of the public. Please familiarize yourself with the information contained in this brochure to better prepare yourself in the case that you should find radioactive material.

scrap yard and landfill

RADIATION WARNING SYMBOL

This symbol should appear on containers and devices which hold radioactive substances. Its color and size may vary; however, its color is usually magenta or black on yellow. Please note that not all containers and devices requiring the radiation warning symbol will be properly marked with the symbol.

NATURE AND QUANTITY OF RADIOACTIVE MATERIAL

The following are examples of terms normally used in association with the radiation warning symbol to indicate the nature of the radioactive material and its quantity. Certain other markings describing the type of container may also appear.

Examples: Nature of Radioactive Material
Cesium 137 (Cs-137 or ¹³⁷Cs)
Iridium 192 (Ir-192 or ¹⁹²Ir)
Cesium 137 (Cs-137 or ¹³⁷Cs)
Radium 226 (Ra-226 or ²²⁶Ra)

Examples: Quantity of Radioactive Material
Curie (Ci)
Millicurie (mCi)
Microcurie (μCi)
Gigabecquerel (GBq)

Examples: Other Markings
DOT
Type A or B
CERAMIC
UNCLASSIFIED

TYPICAL ITEMS

PORTABLE X-RAY UNIT

Message 1

Dear Mr. McCraw,

As suggested in the All Agreement State Letter dated February 2, 2005, I'll be sending 16 photos (<10 MB total) I've personally taken during inspections in N.D. I will break them into 4 email messages to meet our email size constraints.

Feel free to use any of these photos in the scrap metal poster or brochure as you see fit.

Other common items that may be handled by scrap-metal recyclers include materials from oil field operations or oil processing facilities. This includes assorted tubulars, drill stem, pipes, heater-treaters, valves, tanks, etc. which are contaminated with naturally occurring radioactive material (NORM).

If you have any questions or need additional information to support the photos, please let me know.

Sincerely,

Justin M. Griffin, P.E.

CRCPD's Committee on Resource Recovery & Radioactivity

Conference of Radiation Control Program Directors, Inc. (CRCPD)
A Partnership Dedicated to Radiation Protection

February 28, 2005

Aaron T. McGraw
U.S. Nuclear Regulatory Commission

**RE: "Hazardous Scrap - Beware" Poster &
Brochure**

Mr. McGraw:

The CRCPD's E-23 Committee on Resource Recovery and Radioactivity (E-23) wishes to thank the NRC for this opportunity to submit comments on the revision NUREG/BR-0108 "Hazardous Scrap - Beware" poster & accompanying brochure.

Regarding the poster please consider these comments:

1. The audience appears to be scrap handling personnel; however, the inclusion of the picture of "radioactive medical waste" confuses the issue as this is not likely in recycled scrap. If it is also intended for the general public, they are not likely to encounter radioactive scrap. If the NRC wants to hit both audiences and medical waste, make four posters – cannot cram all needed information onto one poster.
2. If the NRC decides to publish only one poster, it should be improved to state: "Unexpected Radioactive Material - Beware."
3. Under "NOTICE" – second bullet – add word, "dense" after "something."
4. Under BACKGROUND
 - A. second paragraph – end second sentence after words, "normal scrap." Very few discoveries and meltings were at "foundries."

Office of the Committee Chairperson

Michael Whalen Jr.

Massachusetts Radiation Control Program
90 Washington Street | Dorchester, MA 02121
Telephone: 617/427-2944, Ext. 2020 | Fax: 617/427-2925
E-mail: Michael.Whalen@state.ma.us

- B. In the third paragraph, what does the word, “incidents” refer to? Finding the radioactive source, the uncontrolled release, or melting in a furnace? It should be better explained.
 - C. Fourth sentence, last sentence – end sentence after the word, “exists.” The uncontrolled release involves more scenarios than processing scrap.
 - D. Sixth paragraph, third sentence – provide a brief explanation why the markings are not present.
- 5. TYPICAL ITEMS – The picture showing an examination gown, rubber glove and blankets is not radioactive waste and could scare people; it should be deleted. Also, most bricks are not contaminated – could also generate unnecessary calls to state agencies. The ones that are usually from highly regulated locations and not very likely to end up being recycled - this picture should also be deleted.
 - 6. RADIATION WARNING SYMBOL – Last sentence - the narrative should provide a brief explanation why. It leaves too many questions.
 - 7. Regarding the poster layout, it would be useful to include a picture of at least one DOT shipping label.
 - 8. Add a couple of "before and after" shots of pristine sources, and then how they actually looked upon discovery, would get the point across that most unexpected sources will not have the same appearance they had prior to their use and abuse.

Regarding the Brochure please consider these comments:

- 1. Under “THIS IS WHAT YOU SHOULD DO” – third item – add word, “dense” after “something.”
- 2. RADIATION WARNING SYMBOL – Last sentence - the narrative should provide a brief explanation why. It leaves too many questions.
- 3. TYPICAL ITEMS – The picture showing an examination gown, rubber glove and blankets is not radioactive waste and could scare people - this should be deleted.
- 4. If the NRC goes with one brochure to contain all the information needed (i.e., scrap, metal, public, industry-specific), add the word "Unexpected" between "Encounter" and "Radioactive."

General Comments regarding both the brochure and poster are as follows:

- 1. A list of all the Agreement State 24-hour phone numbers be furnished on separate document. In fact, the first and foremost Agency to contact is the State Radiation Control Agency. Making it look like it's an even choice between calling the state, EPA or NRC could serve to delay the initiation of a response if EPA or NRC are called first, especially since it's

likely (or at least SHOULD be likely) that the call will be referred back to the state RCP.

2. A web site address for direct users with questions needing a more detailed answer. This web-site could also have more pictures of items.
3. Instead of the block heading "Nature and Quantity of Radioactive Material," why not label it "Examples of Some Markings to Look For" and then list what's in the boxes below.
4. The headings "Nature of Radioactive Material," "Quantity of Radioactive Material" and "Other Markings" take up too much space and could be smaller.

5. Regarding the radiation warning symbol, I would recommend changing the wording on the poster and brochure to say: "This symbol should appear on containers and devices that hold radioactive substances, and may be on a label, tag or etched in the metal. Labels are magenta or black on yellow, but marking and colors may be very faded and worn. Also important to note is that not all containers and/or devices requiring radiation warning symbols will be properly marked."

If you have any questions please contact me using one of my contact information listed in the footer on page one of this letter.

Respectfully submitted,

Michael P. Whalen Jr.
CRCPD / E-23 Chairperson

Subject: comments on poster

Thanks for the opportunity to comment on the poster.

I would definitely make it less wordy and more spacious with room for more pictures.

I would also eliminate the background section, the pictures of generic scrap, contaminated lead bricks, tritium gunsight, and medical waste.

I recommend that you eliminate the nature part of nature and quantity and use an example of a label to illustrate how activity, isotope, etc. are portrayed.

It is difficult to reach the state emergency response number using the NRC website. How about an emergency category with state numbers that is more prominent on the home NRC site.

Subject: STP-05-010 comments

Mr. McCraw, These are comments for STP-05-010 "draft revision to NUREG/BR-0108 "Hazardous Scrap - Beware", from Washington State. In all we thought the document was well put together. We would wish to add:

1. Local State radiation control contact information.
2. A mini procedure such that the finder would understand how to minimize potential exposure.

Thanks for the opportunity. Please accept the comments even though they are tardy.
