Dear Ms Xu:

Furthermore to our telephone conversation I verified that the legal name of the Inc. has remained the same: Northern Virginia Radiology and Nuclear Medicine, Inc.

The storage of the radioactive materials is marked # 9 in the attached diagram (copy of my personal notes). The room is small (6' 5 3/8" x 3' 4 15/16") and completely enclosed including its ceiling (specially constructed). It is always kept locked. Keys have been issued only to the RSO and the Radiation Safety Technologist. A third, the office key is kept in my desk to be used only in emergency.

We use two Geiger type survey instruments (Ludlum 14 C, and Mimi monitor II) properly calibrated by a qualified calibration company.

The protocol and the Palladium use were submitted only for information and should not be included in the review.

I will be glad to answer any further questions you may have.

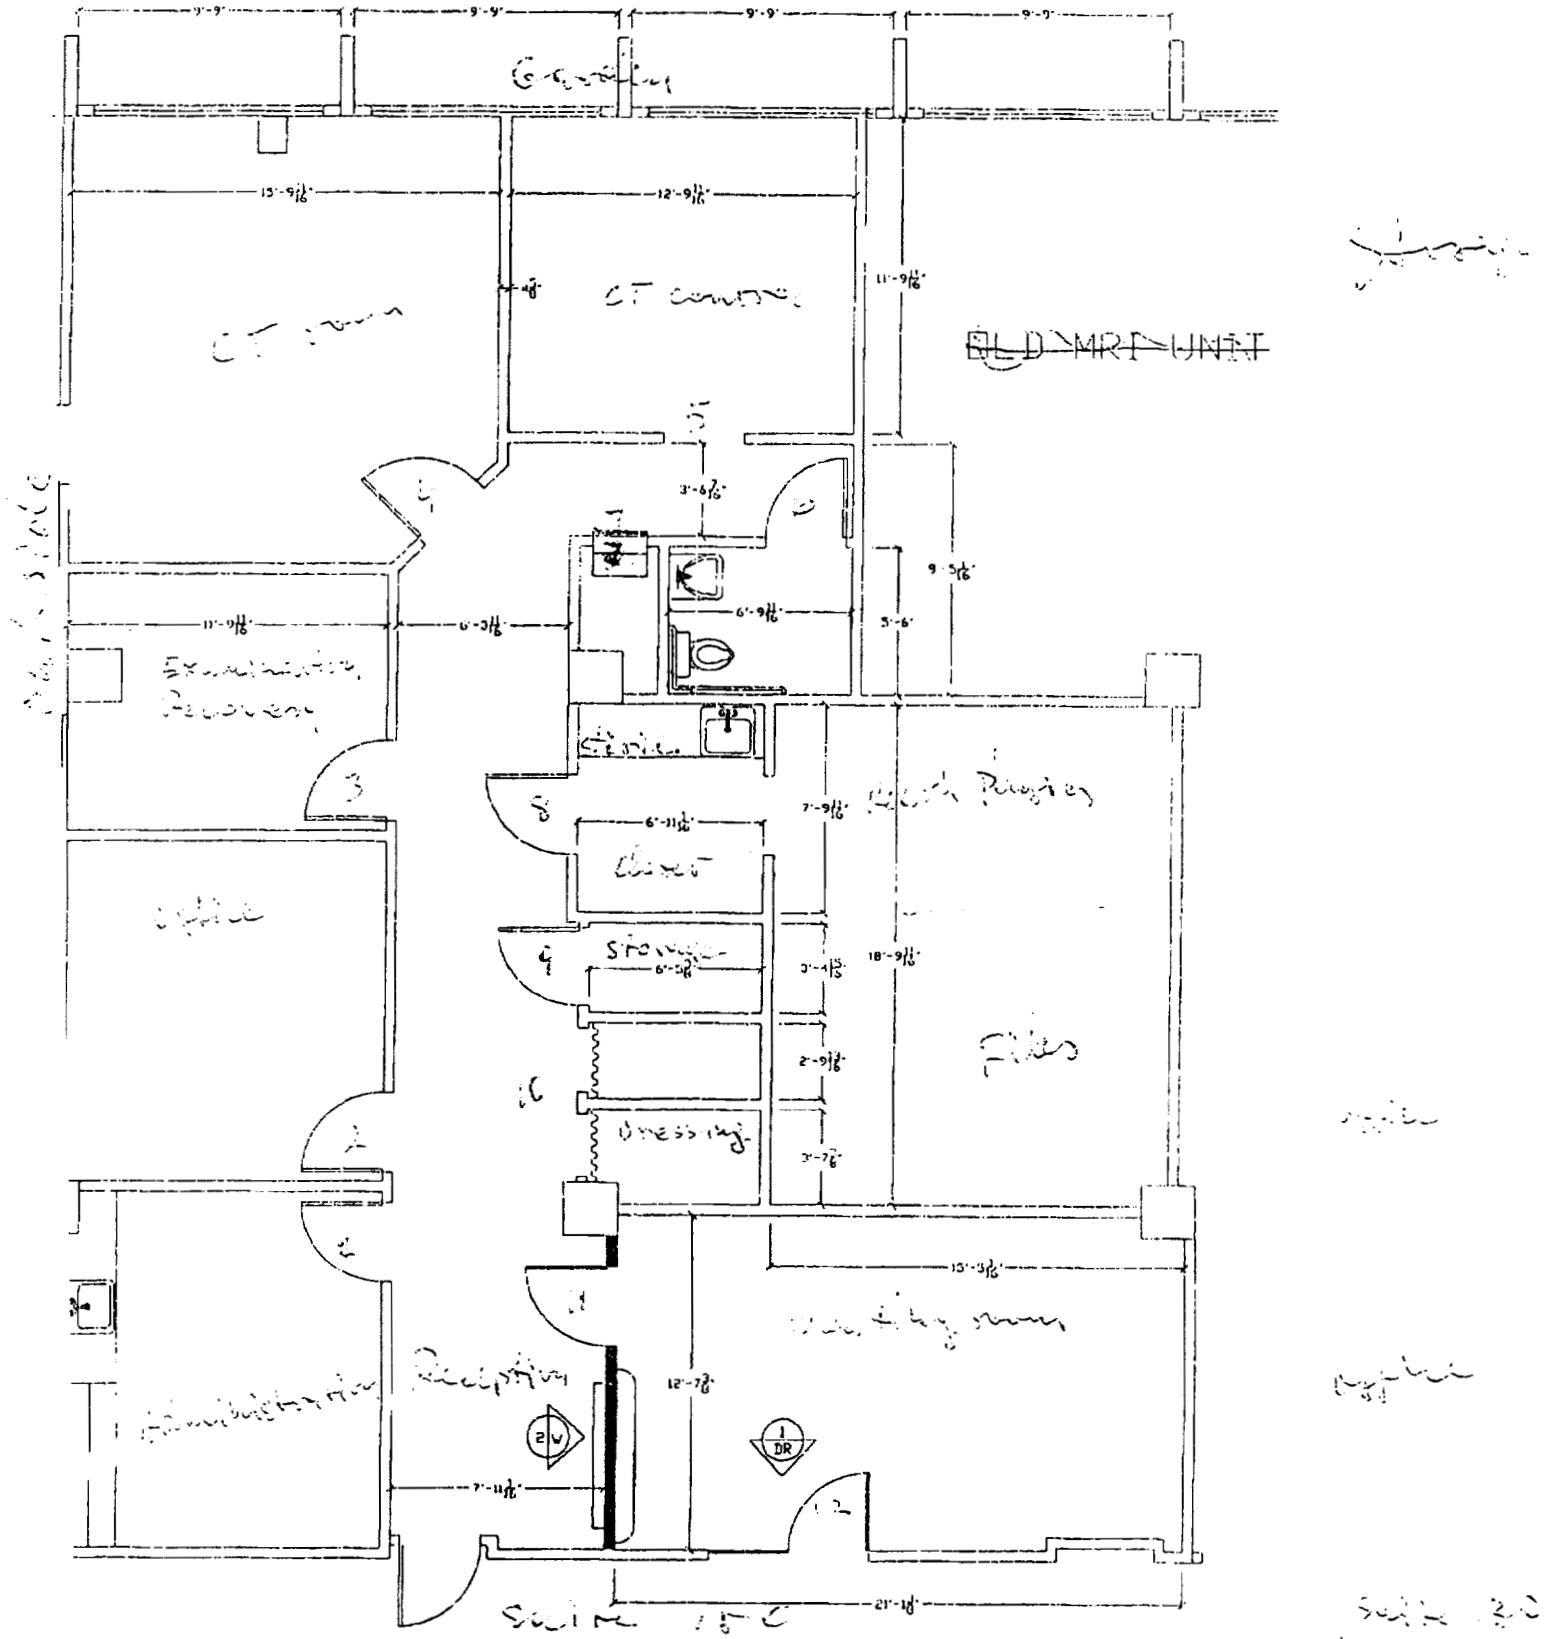

Sincerely,

Peter Paras, Ph.D
RSO, NVR & NM
