

**CGS May 2005 Re-Take Exam
Outline Review Comments**

- ~~1. There needs to be a backup scenario included for review and validation.~~
- ~~2. ES-D-1 did not indicate whether the scenarios were new, bank, or modified.~~
- ~~3. Should Event-1 of Scenario-1 and Scenario-2 be counted as a “reactivity” event?~~
4. Were there more KA's that were eliminated prior to random outline development than the several Systems & E/APEs identified on the ES401-1? *Facility provided complete listing and justification of KA's eliminated prior to outline development; the Chief examiner reviewed and concurred with the eliminated KA's.*

NOTE: Initially, the draft included a written exam for two SROI re-takes and the simulator portion of the operating exam for one RO re-take; subsequent to draft outline submittal, the utility decided not to put the RO up for the simulator re-take, so comments directed at the simulator portion of the outline are no longer relevant to this re-take exam.
