CERTIFIED MAIL

John D. Kinneman
Chief of Materials Security and Industrial Branch
Division of Nuclear Materials Safety
U.S. Nuclear Regulatory Commission, Region I
475 Allendale Road
King of Prussia, PA 19406-1415

RE: Control No. 137290 Information Request

Dear Mr. Kinneman;

In our recent request for unrestricted release of the Alcoa Research Laboratory (ARL) and removal from our Radioactive Materials License, the NRC has requested more information concerning the use of specific radioactive materials at this location. In order to provide the best possible information, I would like to request the following documents through the Freedom of Information Act, which were referenced in the letter dated August 10, 2005:

- All radioactive materials licenses for the ARL since 1958.
- Inspection records conducted on December 15, 1958, September 28, 1961 and any other inspection documentation for the ARL.
- NRC records specifically mentioned in item 5 of the request for additional information (control no. 137290) reflecting radioactive material use in ARL Buildings 29, 44 and 51.

Additionally, environmental surveys will also need to be performed at the ARL, therefore I would like to request an extension of 90 days to provide the information the Commission is seeking.

Should you have any questions please call our Radiation Safety Officer, Johan E. (Ed) Peace, at 724-337-4056.

Sincerely,

Jamie K. Mackay
Environmental, Health and Safety Manager
Alcoa Technical Center
