56⁶
Rpt.

Dear Mr. Kirkman,

Attached are the data collected for health physics purposes at the UIC Fuels Recovery Plant, Wood River Junction, Rhode Island, during the period March 20 through May 20, 1964. These data include:

- Results of Air Sampling of Stacks, Outdoor and Roof Areas;
- Results of Indoor Air Sampling;
- Results of Routine Smear Surveys; and
- Results of Water Samples.

In addition, there is appended the report of the initial Environmental Survey made in the area in April 1963, prior to construction of the plant.

These are the data that had been accumulated for the report made within ninety days of start-up. Data collected during the period May 21 through July 24, 1964 is also being similarly tabulated.

Yours very truly,

JSG/dh
Attach.
