Robert W. Kirkman, Director
Region I, Division of Compliance

UNITED NUCLEAR CORPORATION LETTER DATED AUGUST 18, 1964, TO
HAROLD L. PRICE

CO:I:WGB

Comments on the proposed United Nuclear Corporation inventory procedure are attached. Their proposal does not seem to be concerned with a complete inventory such as the one that UNC took during the last week of June 1964, and most of the comments concern this inadequacy. Perhaps these items will be covered in a more detailed submission from UNC when they decide exactly what they want to do.

There is a possibility of interaction problems when concentrated solution is poured from a gallon bottle to an 11 liter bottle, unless the gallon bottle is kept in a plane above the 11 liter bottle when it is within two feet of the 11 liter bottle. Also, it would seem important to reanalyze each bottle of solution in the light of Peabody's concern about bottles being mislabeled.
