Subject: Fwd: PSEG Nuclear security in the news

I saw the report on KYW last night, too. In addition to Fred Bower's summary, I heard the anonymous individuals say that the temporary guards that have been brought on since 9/11/01 are not armed and they believe they should be. Also, with regard to the 1998 OSRE, they did acknowledge that the plant received good marks on it, while there were some occasions that vital areas were reached by the OSRE intruders. From what I know about OSREs, I believe that a target set can be successful, even when certain vital areas may be reached. Let me know if you want to do anything with this. The stated issues were pretty broad-based, and I would assume that DRP/DRS may already know the answers, but if the staff wants to obtain a formal response from PSEG, we can open an allegation file to prompt that response, if desired. Or you can ask that they respond to it via some other forum.
