Subject: ALLEGATION NO. RI-99-A-0042

My review of this issue indicated that the licensee was following appropriate procedures in implementing an ALARA program. It also appears that radiological and non-radiological risks were evaluated. It is not appropriate to second guess the results of the evaluation. The licensee and NRC are aware of the concern which might be better evaluated on a broader, generic basis.

Based on the available information, I see no need to forward this concern to OSHA.
