Subject: Allegation 98-0062

I completed my review of the subject allegation which pertains to falsification of six separate entries of fire watch logs during February and March 1998. During my review, I did not identify any new technical issues or violations of NRC requirements. Consistent with PSE&G's disciplinary policy, I noted that the licensee substantiated the allegation and that the involved individual had his employment terminated. No additional problems with fire watch logs were identified.
