Re: Dr. George B. Leber  
200 Grand Ave.  
Englewood, NJ 07631

Dear Ms. Gaskins:

This letter is to clarify Dr. George Leber's training and experience in nuclear cardiology. Dr. Leber has personally performed, interpreted and reported 767 myocardial perfusion SPECT studies from Jan. 2002 to the present under my supervision at the above address. Between 1981 and 2001, he performed more than 1000 studies at the nuclear cardiology laboratory at Englewood Hospital, 350 Engle St., Englewood, NJ. Estimating conservatively that each study reflected a minimum of 40 minutes to perform, interpret and report, he has had more than 1000 hours of clinical experience.

Sincerely,

David K. Blood, M.D.
