Steve,

In the Cornell Decommissioning Plan Appendix B, Environmental Report, you provide two different dose estimates for the complete project. On Page 26 it is stated that the collective dose equivalent estimate to workers for the entire decommissioning project is about 18 person-rem. However, on Page 33 it is stated that the total dose estimated for decommissioning workers is 4 person-rem for the entire project evolution. Please discuss this apparent inconsistency.

In the same document on Page 29 it is stated that there will be approximately 4,620 cubic feet of low level radioactive waste generated during the Ward Center decommissioning. However, on page 33 the statement is made that the proposed action could generate approximately 12,000 cubic feet of low level radioactive waste. Please discuss this apparent inconsistency.
