Ref: Request for Revalidation of Route Approval # 201

Dear Ms. Bennington:

Edlow International will be coordinating a shipment of Spent Nuclear Fuel from Japan to DOE's Savannah River Site, South Carolina in late November or early December, 2004. We request revalidation of Route Approval # 201, the Alternate Route from NWS-C to SRS.

The shipments will include five casks on 5 containers from two research reactors in Japan via British Nuclear Fuels plc (BNFL) in England. The fuel will be loaded aboard the vessel "Atlantic Osprey" in November, 2004 at the Port of Barrow, England. The vessel will proceed directly to the Naval Weapons Station Charleston (NWS) in Charleston, SC. Upon arrival, CSX Transportation will take the cargo to SRS via Route # 185. Route #201 is required as our Alternate Route, if needed.

Details of the shipment will be included in our Advance Notice to NRC no later than 14 days prior to arrival in the US.

If additional information is needed, please feel free to contact us at any time.

Sincerely,

Blake Williams  
Director, Spent Fuel Projects
