OPTIONAL FORM NO. 347 (Rev. 3/2005)
PREPARED BY 43 CFR 53.213(e)

ADM002

In accordance with Section G.4, Task Order Procedures, of contract number NRC-03-03-038, this definitizes Task Order No. 016. The effort shall be performed in accordance with the enclosed Statement of Work.

Task Order No. 016 shall be in effect from the award date through May 31, 2006, with a cost ceiling of \$94,728.00. The amount of \$87,862.00 represents the estimated reimbursable costs, and the amount of \$6,866.00 represents the fixed fee.

Funds in the amount of \$70,000.00 are being obligated under this task order. The obligated amount shall, at no time, exceed the task order ceiling. When and if the amount(s) paid and payable to the Contractor hereunder shall equal the obligated amount, the Contractor shall not be obligated to continue performance of the work unless and until the Contracting Officer shall increase the amount obligated with respect to this task order. Any work undertaken by the Contractor in excess of the obligated amount specified above is done so at the Contractor's sole risk.

The following individual is considered to be essential to the successful performance of work hereunder: [REDACTED]. The Contractor agrees that such personnel shall not be removed from the effort under the task order without compliance with Contract Clause H.1, Key Personnel.

The issuance of this task order does not amend any terms or conditions of the subject contract.

Your contacts during the course of this task order are:

Technical Matters: Lawrence Ruth
Project Officer
(301) 415-1211

Contractual Matters: Mona Selden
Sr. Contract Specialist
(301) 415-7907

Acceptance of Task Order No. 016 should be made by having an official, authorized to bind your organization, execute three copies of this document in the space provided and return two copies to the Contract Specialist at the address below. You should retain the third copy for your records.

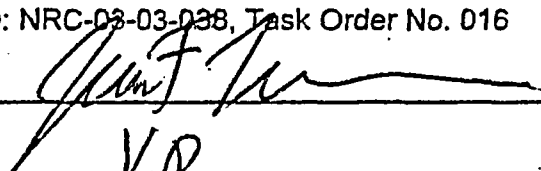

Enclosure: Statement of Work

TITLE: Technical Support for TRACG ESBWR AOO, Stability, and ATWS Licensing Topical Report Reviews

B&R NO.: 520-15-113-105

NRC ISSUING OFFICE: Office of Nuclear Reactor Regulation

PROJECT MANAGER: L. Ruth, 301-415-1211

TECHNICAL MONITOR: V. Klein, 301-415-2888

TAC NO.: MC3288

BACKGROUND

General Electric (GE) has indicated that they will be submitting the Economic Simplified Boiling Water Reactor (ESBWR) for design certification in the summer of 2005. As preparation for this review, there has been an on-going pre-application review. A large portion of the pre-application review pertains to the approval of GE's TRACG code to perform ESBWR calculations. TRACG has been approved for ESBWR Loss-of-Coolant-Accident (LOCA) calculations. GE has submitted topical reports for licensing the TRACG Code for ESBWR anticipated operational occurrences (AOO) and stability analysis. GE plans to submit the TRACG Code for ESBWR anticipated transient without scram (ATWS) in spring of 2005.

OBJECTIVE

The objective of this task order is to obtain contractor assistance to perform a review of the TRACG code to determine with high confidence whether the TRACG code can conservatively evaluate important safety parameters related to AOO, stability and ATWS for ESBWR. The contractor shall review the licensing topical reports, identify requests for additional information (RAIs) and provide Technical Evaluation Reports for AOO, ATWS and stability topical reports.

TECHNICAL AND OTHER SPECIAL QUALIFICATIONS REQUIRED

The use of experienced personnel for this task order is essential to the success of the task. Key personnel cannot be changed without the prior approval of the NRC Contracting Officer.

Personnel with experience and knowledge of TRAC-BF1/TRAC-BD1 1-D and 3-D integration scheme and the implicit or explicit coupled fluid flow and conduction solver, kinetics and Boron transport. In addition, the expert shall have extensive knowledge of TRAC-BF1/TRAC-BD1 physics model.

It is the responsibility of the contractor to assign technical staff, employees, subcontractors, or specialists who have the required educational background, experience, or combination thereof to meet both the technical and regulatory objectives of the work specified in this statement of work. The NRC will rely on representations made by the contractor concerning the

qualifications of the personnel assigned to this work including assurance that all information contained in the technical cost proposals, including resumes, is accurate and truthful.

Personnel assigned to this task order shall be approved for handling and working with proprietary information of GE TRACG and ESBWR. Knowledge and information obtained during the process of this review shall only be used for the sole purpose of performing this review. Personnel shall not be involved in any code development work that would directly conflict with the review work he/she will be performing on TRACG.

WORK REQUIREMENTS AND SCHEDULE

The contractor shall perform a top-down review of the TRACG code by reviewing GE's topical reports and supporting documentation on TRACG applicability for ESBWR for (1) AOO, (2) Stability, and (3) ATWS. When performing the review for each of the three topical reports, the contractor shall focus on three major areas and their applicability to ESBWR. These are: (1) Thermal-Hydraulic Modeling, (2) Transient 3D Neutronics Modeling, and (3) Coupling between Thermal-Hydraulic and Neutronics Modeling. The contractor shall conclude with high confidence on whether the TRACG code can conservatively calculate the power oscillation amplitude and critical power ratio (CPR) for ESBWR for instability, AOO and ATWS events. In addition, the contractor shall provide technical assistance, if necessary, to facilitate ORNL's role in the TRACG for ESBWR Stability review.

Tasks:

1. Determine if there is any additional information necessary to complete the review on TRACG for ESBWR AOO, ATWS and Stability. Identify RAI's for the three topical reports.
2. Review RAI responses.
3. Document the review. Write a Technical Evaluation Report for each of the three topical reports, AOO, ATWS and Stability.

Completion Schedule:

RAIs for AOO and Stability topical reports are due on the date established by the NRC Technical Monitor; RAIs for ATWS topical report are due 45 days after receipt of topical report from GE, or on the date established by the NRC Technical Monitor.

30 days after GE submits responses, or on the date established by the NRC Technical Monitor.

TERs for AOO and Stability topical reports are due on the date established by the NRC Technical Monitor; TER for ATWS topical report is due 120 days after receipt of topical report from GE, or on the date established by the NRC Technical Monitor.

The NRC Technical Monitor shall be notified if there are delays in the completion schedule.

PERIOD OF PERFORMANCE

The period of performance is from the award date through May 31, 2006.

DELIVERABLES

There will be a monthly letter status report delivered as specified in the overall contract.

RAIs and TERs for three topical reports: TRACG application for ESBWR (1) AOO, (2) Stability, and (3) ATWS. RAIs will be documented in a letter and provided to the NRC Technical Monitor. TERs will document the work performed, conclusions reached regarding the acceptability of the topical reports, and the bases for the determination. These reports shall be provided to the NRC Technical Monitor with a copy sent to the NRC Project Officer.

MEETINGS AND TRAVEL

Three, three day, one person trips are expected to NRC Headquarters in Rockville, MD or licensee sites.

NRC-FURNISHED MATERIALS

The material to be used under this task order is Proprietary documentation and will be provided by the NRC in the form of CD-ROMs, and must be handled and protected consistent with the terms of the non-disclosure agreement between the NRC and ISL.

License Fee Recovery

The work specified in this SOW is license fee recoverable.
