Dear Mr. Bailey:

We have reviewed the California proposed Order and corresponding license condition to implement increased controls for certain licensees that possess certain radioactive materials in quantities of concern, received by our office on November 1, 2005. This Order and corresponding license condition were reviewed by comparison to the equivalent NRC requirements that were transmitted from this office on September 2, 2005. We discussed our review of the license condition with you on November 2, 2005.

We have determined that the proposed California Order and corresponding license condition, if issued without significant change, would meet the compatibility category 'B' designation in NRC Order EA-05-090. We note that California has included Radium-226 as being subject to the increased controls, which is under the regulatory jurisdiction of California. The NRC is currently considering what actions may be necessary in response to the provisions of the 2005 Energy Policy Act, and does not have any views at this time on the appropriateness of including Radium-226 in the table of radionuclides subject to the increased controls.

We appreciate receiving the final Order and corresponding license condition issued to effected California licensees.

The SRS Data Sheet summarizes our knowledge of the status of other California regulations and legal binding requirements, as indicated. Please let us know if you note any inaccuracies, or have any comments on the information contained in the SRS Data Sheet. This letter, including the SRS Data Sheet, will be posted on the STP website:
<http://www.hrsd.ornl.gov/nrc/rulemaking.htm>.

If you have any questions regarding the review, the compatibility categories, or any of the NRC requirements used in the review, please contact Mr. Andrew Mauer of my staff at 301-415-3962 or e-mail: anm@nrc.gov.
