

Sharon,

Et 7C

Telecon & follow-up letter from Allegre re: RE-2002-A-0113:

Allegre called me on 12/18/02 after sending in (11/20/02 response to our 11/6/02 "conditional" closure letter. During the 12/18/02 call, indicated that I would send a letter, describing what I wants the NRC to do in more detail. The letter, I promised is attached (dated 12/20/02, rcvd from P.O. Box 12/31/02). It seems like now I wants us to pursue the H&I issue. It also seems like I wants us to address the TARP procedure but I doesn't say a lot about it, other than the fact that I didn't like management's answer, and that I requested an independent QA review, which wasn't done. So it looks like we need to Re-ARB.

Please distribute & add to 1/8/02 ARB schedule.

Thanku

DF

Ex 7c

Dear David Vito,

I am concerned that PSEG Nuclear has created a hostile work environment in which nuclear safety issues cannot be properly resolved. I believe PSEG Nuclear:

- Has a lack of sensitivity to nuclear safety
- Is not maintaining a safety conscious work environment
- Has created a hostile work environment for rising safety concerns
- Does not adhere to procedures that are important to safety

The NRC expects licensees to establish and maintain a "safety-conscious work environment" that encourages employees to raise safety concerns to management, free of any fear of reprisal for doing so. This environment is critical to a licensee's ability to safely carry out its responsibilities. The NRC believes that all workers should feel free to raise concerns to their employers so that they can be dealt with quickly. Workers who raise safety concerns serve a vital role in the protection of public health and safety. Retaliation against those who do so is unlawful and will not be tolerated by the NRC.

Contrary to this expectation, I believe, PSEG Nuclear has engaged in acts of intimidation and retaliation, against myself, for bringing safety concerns to their attention. My concern is

Specific examples of intimidation and retaliation include being/

These actions have created a chilling effect on me and will prevent me from raising safety concerns. Actions taken against me, I believe, represent harassment and intimidation related to protected activities.

I believe that PSEG Nuclear took these actions because of:

- Management's lack of sensitivity to nuclear safety
- Excessive focus on short-term production goals

My safety concerns have been processed through the Corrective Action Program and the PSEG Nuclear Employee Concerns Program. PSEG has concluded that their actions were based on performance issues on my part and my safety concerns are not valid. An independent QA review for Transient Analysis Response Procedure (TARP) compliance, I requested, was denied.

RECEIVED BY SAC

12/31/02

I feel PSEG Nuclear cannot resolve safety concerns on its own volition, but needs NRC enforcement action to do so. Please contract me and let me know if the NRC is interesting in resolving these concerns.
