

UNITED STATES  
NUCLEAR REGULATORY COMMISSION  
WASHINGTON, D. C. 20555

MAY 18 1992

MEMORANDUM FOR: Ronald R. Bellamy, Chief  
Nuclear Materials Safety Branch, RI

FROM: John E. Glenn, Chief  
Medical, Academic, and Commercial  
Use Safety Branch  
Division of Industrial and  
Medical Nuclear Safety, NMSS

SUBJECT: TECHNICAL ASSISTANCE REQUEST - WESTINGHOUSE ELECTRIC COMPANY

I am responding to your technical assistance request dated April 14, 1992 (Enclosure 1) for confirmation of your interpretation of the Branch Technical Position (BTP) for evaluation of residual concentrations of processed uranium on the Bloomfield, NJ site and generic applicability to other remediated facilities with processed uranium waste.

Your interpretation is correct (see Enclosure 2) and is applicable to other remediated sites. For unenriched uranium, with no decay products of U-234 present, the applicable values in the BTP are those for depleted uranium.

If you have any questions, please contact Ms. Patricia A. Santiago at (301) 504-2632.

A handwritten signature in cursive script, reading "John E. Glenn", is positioned above the typed name and title.

John E. Glenn, Chief  
Medical, Academic, and Commercial  
Use Safety Branch  
Division of Industrial and  
Medical Nuclear Safety, NMSS
