RE: Close out survey for:
Radioactive Material License Nos. 47-16259-01
Monongalia General Hospital

Gentlemen:

The following is a close-out survey for our hot lab/scan area. We are hereby notifying you that we have begun using our new hot lab/scan area and that the old areas have been released for unrestricted use.

Gross contamination smears were taken at the general areas depicted on the diagram. The smears were counted in a Canberra Series 35 plus well counter with an efficiency for Tc-99m which is greater than 90%. Area radiation level surveys were taken at each smear site. The background for the area surveys was 0.02 mR/hr using a recently calibrated SE Inspector GM survey meter. All readings were 0.02 mR/hr.

Fifty smears were taken on the doors, cabinets, walls, floors and counters in the injection area, scan room, hot lab and stress lab. Background was 126. MDA was 56. The smears were counted together and produced a count of 8 cpm or 10 dpm at 90% efficiency. Survey was performed on 12/15/05.

The facility has been determined to be contamination-free and has been released for unrestricted use.

Smears and area surveys were performed and counted by Mike Snyder, Chief Technologist

Report was prepared by Mark T. Perna, M.S., DABR, Medical Physicist

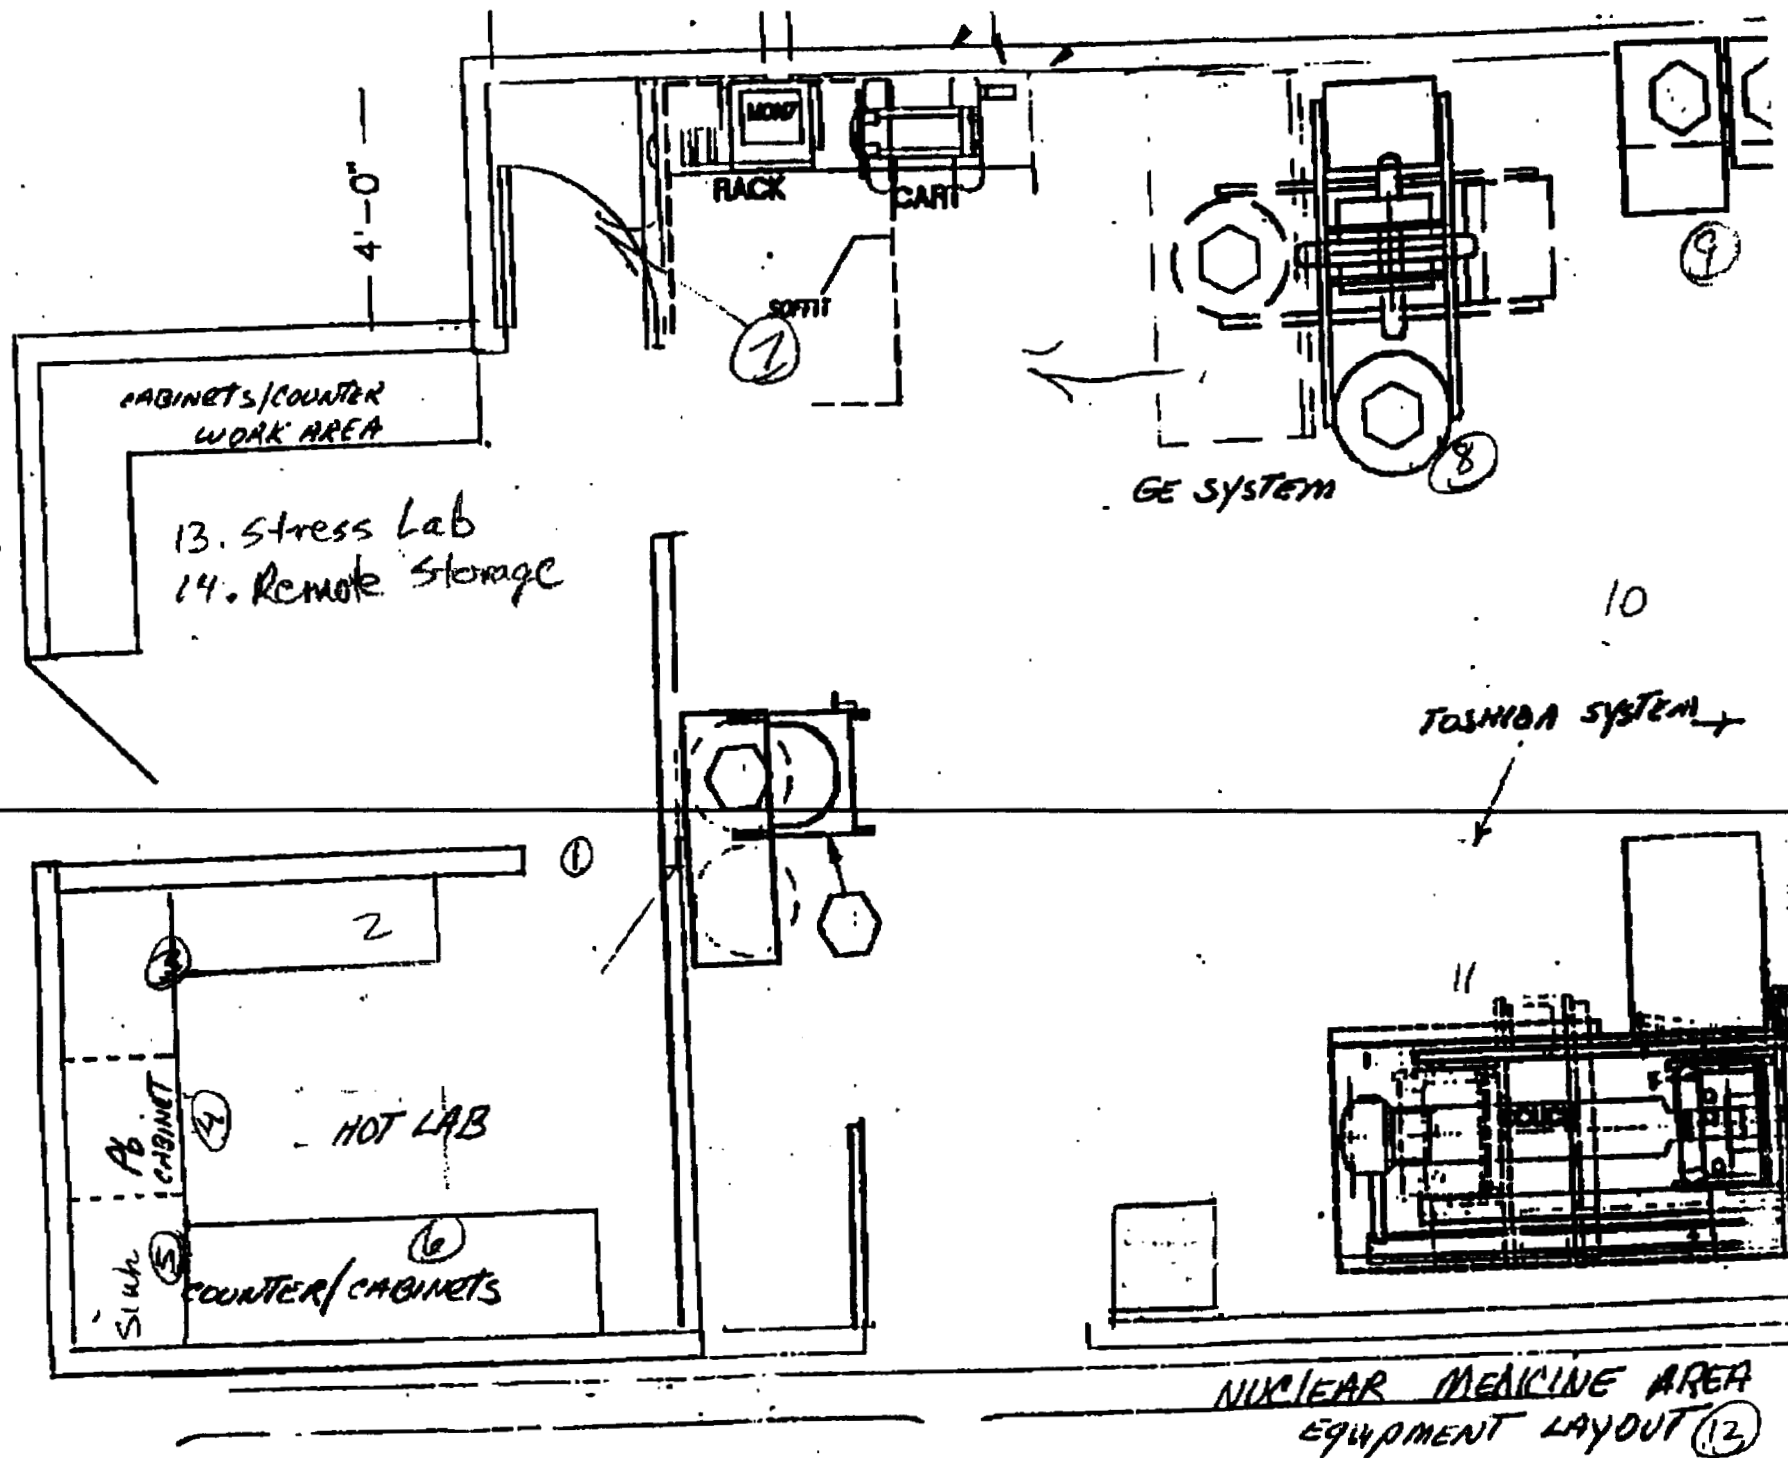

Sincerely,

Director of Outpatient Care
Monongalia General Hospital
Morgantown, WV 26505
