OFFICE OF SECRETARY
RULEMAKINGS AND
ADJUDICATIONS STAFF

SERVED February 16, 2006

Docket No. 50-219-LR

The Honorable Jim Saxton
U.S. House of Representatives
Washington, D.C. 20515

Dear Congressman Saxton:

This is a response to your letter dated January 27, 2006, addressed to Chairman Nils J. Diaz, in which you request that Ultrasonic Testing be conducted on the lower region of the reactor vessel containment walls for the Oyster Creek Nuclear Generating Station as part of the consideration by the NRC of the license renewal application for the plant. Your letter has been referred to the NRC staff. The staff will address your specific concerns in a direct reply.

Currently, intervention petitions addressing the license renewal application for the Oyster Creek Station are before an Atomic Safety and Licensing Board. Under Nuclear Regulatory Commission procedural rules for adjudications, the Commission has an appellate role in proceedings commenced before its Atomic Safety and Licensing Boards. Because of that role, I trust that you will understand that the Commissioners must remain impartial during the pendency of a case, whether it is before a Licensing Board or on appeal to the Commission.

A copy of your letter and this response, as well as the response of the NRC staff, when issued, will be served on the participants in the Oyster Creek proceeding.

Sincerely,

A handwritten signature in black ink, appearing to read "Annette Vietti-Cook".

Dr. Nils J. Diaz, Chairman
Nuclear Regulatory Commission
11555 Rockville Pike
Rockville, MD 20852

Dear Dr. Diaz:

I write to you today regarding the Oyster Creek Nuclear Generating Station in Forked River, New Jersey.

It has come to my attention that Ultrasonic Testing is conducted on the Upper Region vessel containment walls of the main reactor every two years as the result of an agreement reached between the Nuclear Regulatory Commission (NRC) and the plant's original owner, GPU Energy. As I understand it, the NRC times these analyses to take place in conjunction with plant refueling.

It has also come to my attention, however, that Ultrasonic Testing on the Lower Region has not taken place in nearly a decade. While I strongly support the NRC's commitment to testing the Upper Region every two years, I am gravely concerned about the robustness of the container walls in the Lower Region.

I strongly urge the NRC, as it considers the license renewal application of the nation's oldest operating nuclear power plant, to conduct an Ultrasonic Test of the lower region and to take these findings into consideration before issuing a final decision. Additionally, I request a summary of the most recent findings be made available to the public. The plant is scheduled to go down for refueling in 2006, I am requesting the Lower Region Ultrasonic Tests be conducted at this time.

Past correspondence regarding the security of Oyster Creek has prompted the NRC to respond that security is an ongoing issue that is not considered during the license renewal process. However, conducting routine analysis on the thickness of vessel containment walls at nuclear power plants is an operational safety issue directly related to the relicensure process.

Thank you for your continued attention to this critical matter and I look forward to your response.

Sincerely,

Jim Saxton
Member of Congress
