A Citizen Petition¹

TO: The Honorable James Douglas, Governor of Vermont; Members of the Vermont Legislature; Vermont Public Service Board; Vermont State Nuclear Advisory Panel; and The Vermont Department of Public Service:

WHEREAS:

Louisiana-based Entergy Nuclear (Limited Liability Corporation) hopes very soon to experiment with running the VT Yankee Nuclear Reactor at 120% of its designed power level, testing the response of aged and embrittled components to increased vibration and steam flow, thereby "creating an unacceptable risk to the lives of all who live in the vicinity of the reactor;" ²

AND WHEREAS: The increased risk of an accident could forever change life as we know it in our beautiful state and region; and the increasing legacy of deadly radioactive waste shall be an enormous financial and environmental burden for our children's children: these are NOT in keeping with Vermont's conservative and self-reliant heritage;

THEREFORE :

We ask you to join us in calling for a complete examination of the Vermont Yankee Nuclear Reactor, equal in scope to the Independent Safety Assessment conducted at Maine Yankee.

TO: The Honorable James Douglas, Governor of Vermont; Members of the Vermont Legislature; Vermont Public Service Board; Vermont State Nuclear Advisory Panel; and The Vermont Department of Public Service:

WHEREAS:

Louisiana-based Entergy Nuclear (Limited Liability Corporation) hopes very soon to experiment with running the VT Yankee Nuclear Reactor at 120% of its designed power level, testing the response of aged and embrittled components to increased vibration and steam flow, and "creating unacceptable risk to the lives of all who live in the vicinity of the reactor" ² in order to increase its profits,

AND WHEREAS:

The increased risk of accidents could forever change life as we know it in our beautiful state and region; and the increasing legacy of deadly radioactive waste shall be an enormous financial and environmental burden for our children's children: These are **NOT** in keeping with Vermont's conservative and self-reliant image,

Therefore :

We ask you to join us in calling for a complete physical examination of the Vermont Yankee Nuclear Reactor, equal in scope to the Independent Safety Assessment conducted at Maine Yankee.

TO: The Honorable James Douglas, Governor of Vermont; Members of the Vermont Legislature; Vermont Public Service Board; Vermont State Nuclear Advisory Panel; and The Vermont Department of Public Service:

WHEREAS:

Louisiana-based Entergy Nuclear (Limited Liability Corporation) hopes very soon to experiment with running the VT Yankee Nuclear Reactor at 120% of its designed power level, testing the response of aged and embrittled components to increased vibration and steam flow, and "creating unacceptable risk to the lives of all who live in the vicinity of the reactor" ² in order to increase its profits,

AND WHEREAS:

The increased risk of accidents could forever change life as we know it in our beautiful state and region; and the increasing legacy of deadly radioactive waste shall be an enormous financial and environmental burden for our children's children: These are NOT in keeping with Vermont's conservative and self-reliant image,

Therefore :

We ask you to join us in calling for a complete physical examination of the Vermont Yankee Nuclear Reactor, equal in scope to the Independent Safety Assessment conducted at Maine Yankee.

A Citizen Petition¹

TO: The Honorable James Douglas, Governor of Vermont; Members of the Vermont Legislature; Vermont Public Service Board; Vermont State Nuclear Advisory Panel; and The Vermont Department of Public Service:

WHEREAS:

Louisiana-based Entergy Nuclear (Limited Liability Corporation) hopes very soon to experiment with running the VT Yankee Nuclear Reactor at 120% of its designed power level, testing the response of aged and embrittled components to increased vibration and steam flow, thereby "creating an unacceptable risk to the lives of all who live in the vicinity of the reactor;" ²

AND WHEREAS: The increased risk of an accident could forever change life as we know it in our beautiful state and region; and the increasing legacy of deadly radioactive waste shall be an enormous financial and environmental burden for our children's children: these are NOT in keeping with Vermont's conservative and self-reliant heritage;

THEREFORE :

We ask you to join us in calling for a complete examination of the Vermont Yankee Nuclear Reactor, equal in scope to the Independent Safety Assessment conducted at Maine Yankee.

A Citizen Petition¹

TO: The Honorable James Douglas, Governor of Vermont; Members of the Vermont Legislature; Vermont Public Service Board; Vermont State Nuclear Advisory Panel; and The Vermont Department of Public Service:

WHEREAS:

Louisiana-based Entergy Nuclear (Limited Liability Corporation) hopes very soon to experiment with running the VT Yankee Nuclear Reactor at 120% of its designed power level, testing the response of aged and embrittled components to increased vibration and steam flow, thereby "creating an unacceptable risk to the lives of all who live in the vicinity of the reactor;" ²

AND WHEREAS: The increased risk of an accident could forever change life as we know it in our beautiful state and region; and the increasing legacy of deadly radioactive waste shall be an enormous financial and environmental burden for our children's children: these are NOT in keeping with Vermont's conservative and self-reliant heritage;

THEREFORE :

We ask you to join us in calling for a complete examination of the Vermont Yankee Nuclear Reactor, equal in scope to the Independent Safety Assessment conducted at Maine Yankee.

A Citizen Petition¹

TO: The Honorable James Douglas, Governor of Vermont; Members of the Vermont Legislature; Vermont Public Service Board; Vermont State Nuclear Advisory Panel; and The Vermont Department of Public Service:

WHEREAS:

Louisiana-based Entergy Nuclear (Limited Liability Corporation) hopes very soon to experiment with running the VT Yankee Nuclear Reactor at 120% of its designed power level, testing the response of aged and embrittled components to increased vibration and steam flow, and "creating unacceptable risk to the lives of all who live in the vicinity of the reactor"² in order to increase its profits,

AND WHEREAS:

The increased risk of accidents could forever change life as we know it in our beautiful state and region; and the increasing legacy of deadly radioactive waste shall be an enormous financial and environmental burden for our children's children: These are NOT in keeping with Vermont's conservative and self-reliant image,

THEREFORE :

We ask you to join us in calling for a complete physical examination of the Vermont Yankee Nuclear Reactor, equal in scope to the Independent Safety Assessment conducted at Maine Yankee.

A Citizen Petition¹

TO: The Honorable James Douglas, Governor of Vermont; Members of the Vermont Legislature; Vermont Public Service Board; Vermont State Nuclear Advisory Panel; and The Vermont Department of Public Service:

WHEREAS:

Louisiana-based Entergy Nuclear (Limited Liability Corporation) hopes very soon to experiment with running the VT Yankee Nuclear Reactor at 120% of its designed power level, testing the response of aged and embrittled components to increased vibration and steam flow, and "creating unacceptable risk to the lives of all who live in the vicinity of the reactor"² in order to increase its profits,

AND WHEREAS:

The increased risk of accidents could forever change life as we know it in our beautiful state and region; and the increasing legacy of deadly radioactive waste shall be an enormous financial and environmental burden for our children's children: These are **NOT** in keeping with Vermont's conservative and self-reliant image,

THEREFORE :

We ask you to join us in calling for a complete physical examination of the Vermont Yankee Nuclear Reactor, equal in scope to the Independent Safety Assessment conducted at Maine Yankee.

A Citizen Petition circulated by New England Coalition; PO Box 545

TO: The Governors and Elected Officials of Vermont, New Hampshire, and Brattleboro, VT
Massachusetts

FROM: The undersigned citizens of Vermont, New Hampshire, and
Massachusetts

05302

WHEREAS, Louisiana-based Entergy Corporation has applied to super-load nuclear fuel in the Vermont Yankee Nuclear Power Plant at Vernon to 120% of the reactor's original 1973 license, and

-| this increase will place new stress on Vermont Yankee's aging components increasing risk of accidents and plant blackouts that could affect the entire state, therefore,

-| The recent NRC Engineering Team Inspection identified 8 significant problems in only 45 systems examined, representing only about 1% of the plant's critical systems. These results indicate that the other 99% of the plant's systems may contain hundreds of other problems that remain unidentified, therefore;

-| a full top-to-bottom examination of Vermont Yankee is prudent, protective and conservative, therefore,

WE NOW SAY, join us in calling for an Independent Safety Assessment of Vermont Yankee, similar to those already conducted at aging nuclear plants in Maine and Connecticut.

The increased risk of accidents could forever change life as we know it in our beautiful state and region; and the increasing legacy of deadly radioactive waste shall be an enormous financial and environmental burden for our children's children: These are NOT in keeping with Vermont's conservative and self-reliant image,

THEREFORE :

We ask you to join us in calling for a complete physical examination of the Vermont Yankee Nuclear Reactor, equal in scope to the Independent Safety Assessment conducted at Maine Yankee.

A Citizen Petition

TO: The Honorable James Douglas, Governor of Vermont; Members of the Vermont Legislature; Vermont Public Service Board; Vermont State Nuclear Advisory Panel; and The Vermont Department of Public Service:

WHEREAS:

Louisiana-based Entergy Nuclear (Limited Liability Corporation) hopes very soon to experiment with running the VT Yankee Nuclear Reactor at 120% of its designed power level, testing the response of aged and embrittled components to increased vibration and steam flow, and "creating unacceptable risk to the lives of all who live in the vicinity of the reactor" in order to increase its profits,

AND WHEREAS:

The increased risk of accidents could forever change life as we know it in our beautiful state and region; and the increasing legacy of deadly radioactive waste shall be an enormous financial and environmental burden for our children's children: These are NOT in keeping with Vermont's conservative and self-reliant image,

THEREFORE :

We ask you to join us in calling for a complete physical examination of the Vermont Yankee Nuclear Reactor, equal in scope to the Independent Safety Assessment conducted at Maine Yankee.

A CITIZEN PETITION

TO: The Honorable James Douglas Governor of Vermont, Members of the Vermont Legislature, Vermont Public Service Board, Vermont State Nuclear Advisory Panel, and the Vermont Department of Public Service:

WHEREAS: Louisiana based Entergy Nuclear (Limited Liability Corporation) hopes very soon to experiment with running the VT Yankee Nuclear Reactor at 120% of its designed power level, testing the response of aged and embrittled components to increased vibration and steam flow, thereby "creating an unacceptable risk to the lives of all who live in the vicinity of the reactor";

AND WHEREAS: The increased risk of an accident could forever change life as we know it in our beautiful state and region; and the increasing legacy of deadly radioactive waste shall be an enormous financial and environmental burden for our children and their children; these are NOT in keeping with Vermont's conservative and self-reliant heritage;

THEREFORE:

We ask you to join us in calling for a complete examination of the Vermont Yankee Nuclear Reactor, equal in scope to the Independent Safety Assessment conducted at Maine Yankee.

A Citizen Petition

CAT# 10495:

#2

TO: The Governors and Elected Officials of Vermont, New Hampshire, and Massachusetts

FROM: The undersigned citizens of Vermont, New Hampshire, and Massachusetts

WHEREAS, Louisiana-based Entergy Corporation has applied to super-load nuclear fuel in the Vermont Yankee Nuclear Power Plant at Vernon to 120% of the reactor's original 1973 license, and

▪ this increase will place new stress on Vermont Yankee's aging components increasing risk of accidents and plant blackouts that could affect the entire state, and:

▪ The recent NRC Engineering Team Inspection identified 8 significant problems in only 45 systems examined, representing only about 1% of the plant's critical systems. These results indicate that the other 99% of the plant's systems may contain hundreds of other problems that remain unidentified, and:

▪ a full top-to-bottom examination of Vermont Yankee is prudent, protective and conservative, therefore,

WE NOW SAY, join us in calling for an Independent Safety Assessment of Vermont Yankee¹, similar to those already conducted at aging nuclear plants in Maine and Connecticut.

¹ According to the definitions and parameters provided in the report: Independent Safety Assessment of Maine Yankee Atomic Power Company, October 1996, by the Nuclear Regulatory Commission. This study shall: (1) independently assess the conformance of Vermont Yankee to its design and licensing bases including appropriate reviews at the site and corporate offices; (2) independently assess operational safety performance giving risk perspectives where appropriate; (3) evaluate the effectiveness of licensee self-assessments, corrective actions, and improvement plans; (4) determine the root cause(s) of safety-significant findings and draw conclusions on overall performance.

A Citizen Petition**TO:** The Governors and Elected Officials of Vermont, New Hampshire, and Massachusetts**FROM:** The undersigned citizens of Vermont, New Hampshire, and Massachusetts**WHEREAS, Louisiana-based Entergy Corporation** has applied to super-load nuclear fuel in the Vermont Yankee Nuclear Power Plant at Vernon to 120% of the reactor's original 1973 license, and

- this increase will place new stress on Vermont Yankee's aging components increasing risk of accidents and plant blackouts that could affect the entire state, and;

- The recent NRC Engineering Team Inspection identified 8 significant problems in only 45 systems examined, representing only about 1% of the plant's critical systems. These results indicate that the other 99% of the plant's systems may contain hundreds of other problems that remain unidentified, and;

- a full top-to-bottom examination of Vermont Yankee is prudent, protective and conservative, therefore,

WE NOW SAY, join us in calling for an Independent Safety Assessment of Vermont Yankee¹, similar to those already conducted at aging nuclear plants in Maine and Connecticut.

TO: The Governors and Elected Officials of Vermont, New Hampshire, and Massachusetts

FROM: The undersigned citizens of Vermont, New Hampshire, and Massachusetts

WHEREAS, Louisiana-based Entergy Corporation has applied to super-load nuclear fuel in the Vermont Yankee Nuclear Power Plant at Vernon to 120% of the reactor's original 1973 license, and

- this increase will place new stress on Vermont Yankee's aging components increasing risk of accidents and plant blackouts that could affect the entire state, and;
- The recent NRC Engineering Team Inspection identified 8 significant problems in only 45 systems examined, representing only about 1% of the plant's critical systems. These results indicate that the other 99% of the plant's systems may contain hundreds of other problems that remain unidentified, and;
- a full top-to-bottom examination of Vermont Yankee is prudent, protective and conservative, therefore,

WE NOW SAY, join us in calling for an Independent Safety Assessment of Vermont Yankee¹, similar to those already conducted at aging nuclear plants in Maine and Connecticut.

¹ According to the definitions and parameters provided in the report: Independent Safety Assessment of Maine Yankee Atomic Power Company, October 1996, by the Nuclear Regulatory Commission. This study shall: (1) independently assess the conformance of Vermont Yankee to its design and licensing bases including appropriate reviews at the site and corporate offices; (2) independently assess operational safety performance giving risk perspectives where appropriate; (3) evaluate the effectiveness of licensee self-assessments, corrective actions, and improvement plans; (4) determine the root cause(s) of safety-significant findings and draw conclusions on overall performance.

¹ According to the definitions and parameters provided in the report: Independent Safety Assessment of Maine Yankee Atomic Power Company, October 1996, by the Nuclear Regulatory Commission. This study shall: (1) independently assess the conformance of Vermont Yankee to its design and licensing bases including appropriate reviews at the site and corporate offices; (2) independently assess operational safety performance giving risk perspectives where appropriate; (3) evaluate the effectiveness of licensee self-assessments, corrective actions, and improvement plans; (4) determine the root cause(s) of safety-significant findings and draw conclusions on overall performance.

A Citizen Petition

CAT. # 35

Rec. 6/36/05

TO: The Governors and Elected Officials of Vermont, New Hampshire, and Massachusetts

FROM: The undersigned citizens of Vermont, New Hampshire, and Massachusetts

WHEREAS, Louisiana-based Entergy Corporation has applied to super-load nuclear fuel in the Vermont Yankee Nuclear Power Plant at Vernon to 120% of the reactor's original 1973 license, and

▪ this increase will place new stress on Vermont Yankee's aging components increasing risk of accidents and plant blackouts that could affect the entire state, and:

▪ The recent NRC Engineering Team Inspection identified 8 significant problems in only 45 systems examined, representing only about 1% of the plant's critical systems. These results indicate that the other 99% of the plant's systems may contain hundreds of other problems that remain unidentified, and:

▪ a full top-to-bottom examination of Vermont Yankee is prudent, protective and conservative, therefore,

WE NOW SAY, join us in calling for an Independent Safety Assessment of Vermont Yankee¹, similar to those already conducted at aging nuclear plants in Maine and Connecticut.

TO: The Governors and Elected Officials of Vermont, New Hampshire, and Massachusetts

FROM: The undersigned citizens of Vermont, New Hampshire, and Massachusetts

WHEREAS, Louisiana-based Entergy Corporation has applied to super-load nuclear fuel in the Vermont Yankee Nuclear Power Plant at Vernon to 120% of the reactor's original 1973 license, and

▪ this increase will place new stress on Vermont Yankee's aging components increasing risk of accidents and plant blackouts that could affect the entire state, and:

▪ The recent NRC Engineering Team Inspection identified 8 significant problems in only 45 systems examined, representing only about 1% of the plant's critical systems. These results indicate that the other 99% of the plant's systems may contain hundreds of other problems that remain unidentified, and:

▪ a full top-to-bottom examination of Vermont Yankee is prudent, protective and conservative, therefore,

WE NOW SAY, join us in calling for an Independent Safety Assessment of Vermont Yankee¹, similar to those already conducted at aging nuclear plants in Maine and Connecticut.

TO: The Governors and Elected Officials of Vermont, New Hampshire, and Massachusetts

FROM: The undersigned citizens of Vermont, New Hampshire, and Massachusetts

WHEREAS, Louisiana-based Entergy Corporation has applied to super-load nuclear fuel in the Vermont Yankee Nuclear Power Plant at Vernon to 120% of the reactor's original 1973 license, and

- this increase will place new stress on Vermont Yankee's aging components increasing risk of accidents and plant blackouts that could affect the entire state, and;
- The recent NRC Engineering Team Inspection identified 8 significant problems in only 45 systems examined, representing only about 1% of the plant's critical systems. These results indicate that the other 99% of the plant's systems may contain hundreds of other problems that remain unidentified, and;
- a full top-to-bottom examination of Vermont Yankee is prudent, protective and conservative, therefore,

WE NOW SAY, join us in calling for an Independent Safety Assessment of Vermont Yankee¹, similar to those already conducted at aging nuclear plants in Maine and Connecticut.

A Citizen Petition

TO: The Governors and Elected Officials of Vermont, New Hampshire, and Massachusetts

FROM: The undersigned citizens of Vermont, New Hampshire, and Massachusetts

WHEREAS, Louisiana-based Entergy Corporation has applied to super-load nuclear fuel in the Vermont Yankee Nuclear Power Plant at Vernon to 120% of the reactor's original 1973 license, and

▪ this increase will place new stress on Vermont Yankee's aging components increasing risk of accidents and plant blackouts that could affect the entire state, and:

▪ The recent NRC Engineering Team Inspection identified 8 significant problems in only 45 systems examined, **representing only about 1% of the plant's critical systems.** These results indicate that the other 99% of the plant's systems may contain hundreds of other problems that remain unidentified, and:

▪ a full top-to-bottom examination of Vermont Yankee is prudent, protective and conservative, therefore,

WE NOW SAY, join us in calling for an Independent Safety Assessment of Vermont Yankee¹, similar to those already conducted at aging nuclear plants in Maine and Connecticut.

¹ According to the definitions and parameters provided in the report: Independent Safety Assessment of Maine Yankee Atomic Power Company, October 1996, by the Nuclear Regulatory Commission. This study shall: (1) independently assess the conformance of Vermont Yankee to its design and licensing bases including appropriate reviews at the site and corporate offices; (2) independently assess operational safety performance giving risk perspectives where appropriate; (3) evaluate the effectiveness of licensee self-assessments, corrective actions, and improvement plans; (4) determine the root cause(s) of safety-significant findings and draw conclusions on overall performance.

¹ According to the definitions and parameters provided in the report: Independent Safety Assessment of Maine Yankee Atomic Power Company, October 1996, by the Nuclear Regulatory Commission. This study shall: (1) independently assess the conformance of Vermont Yankee to its design and licensing bases including appropriate reviews at the site and corporate offices; (2) independently assess operational safety performance giving risk perspectives where appropriate; (3) evaluate the effectiveness of licensee self-assessments, corrective actions, and improvement plans; (4) determine the root cause(s) of safety-significant findings and draw conclusions on overall performance.

A Citizen Petition

(AT. #82
Rec. 7/20/03)

TO: The Governors and Elected Officials of Vermont, New Hampshire, and Massachusetts

FROM: The undersigned citizens of Vermont, New Hampshire, and Massachusetts

WHEREAS, Louisiana-based Entergy Corporation has applied to super-load nuclear fuel in the Vermont Yankee Nuclear Power Plant at Vernon to 120% of the reactor's original 1973 license, and

▪ this increase will place new stress on Vermont Yankee's aging components increasing risk of accidents and plant blackouts that could affect the entire state, and:

▪ The recent NRC Engineering Team Inspection identified 8 significant problems in only 45 systems examined, representing only about 1% of the plant's critical systems. These results indicate that the other 99% of the plant's systems may contain hundreds of other problems that remain unidentified, and:

▪ a full top-to-bottom examination of Vermont Yankee is prudent, protective and conservative, therefore,

WE NOW SAY, join us in calling for an Independent Safety Assessment of Vermont Yankee¹, similar to those already conducted at aging nuclear plants in Maine and Connecticut.

¹ According to the definitions and parameters provided in the report: Independent Safety Assessment of Maine Yankee Atomic Power Company, October 1996, by the Nuclear Regulatory Commission. This study shall: (1) independently assess the conformance of Vermont Yankee to its design and licensing bases including appropriate reviews at the site and corporate offices; (2) independently assess operational safety performance giving risk perspectives where appropriate; (3) evaluate the effectiveness of licensee self-assessments, corrective actions, and improvement plans; (4) determine the root cause(s) of safety-significant findings and draw conclusions on overall performance.

A Citizen Petition

(AT. # 93

Rec. 7/20/05

TO: The Governors and Elected Officials of Vermont, New Hampshire, and Massachusetts

FROM: The undersigned citizens of Vermont, New Hampshire, and Massachusetts

WHEREAS, Louisiana-based Entergy Corporation has applied to super-load nuclear fuel in the Vermont Yankee Nuclear Power Plant at Vernon to 120% of the reactor's original 1973 license, and

▪ this increase will place new stress on Vermont Yankee's aging components increasing risk of accidents and plant blackouts that could affect the entire state, and:

▪ The recent NRC Engineering Team Inspection identified 8 significant problems in only 45 systems examined, representing only about 1% of the plant's critical systems. These results indicate that the other 99% of the plant's systems may contain hundreds of other problems that remain unidentified, and:

▪ a full top-to-bottom examination of Vermont Yankee is prudent, protective and conservative, therefore,

WE NOW SAY, join us in calling for an Independent Safety Assessment of Vermont Yankee¹, similar to those already conducted at aging nuclear plants in Maine and Connecticut.

WHEREAS, Louisiana-based Entergy Corporation has applied to super-load nuclear fuel in the Vermont Yankee Nuclear Power Plant at Vernon to 120% of the reactor's original 1973 license, and

- this increase will place new stress on Vermont Yankee's aging components increasing risk of accidents and plant blackouts that could affect the entire state, and;
- The recent NRC Engineering Team Inspection identified 8 significant problems in only 45 systems examined, representing only about 1% of the plant's critical systems. These results indicate that the other 99% of the plant's systems may contain hundreds of other problems that remain unidentified, and;
- a full top-to-bottom examination of Vermont Yankee is prudent, protective and conservative, therefore,

WE NOW SAY, join us in calling for an Independent Safety Assessment of Vermont Yankee¹, similar to those already conducted at aging nuclear plants in Maine and Connecticut.

¹ According to the definitions and parameters provided in the report: Independent Safety Assessment of Maine Yankee Atomic Power Company, October 1996, by the Nuclear Regulatory Commission. This study shall: (1) independently assess the conformance of Vermont Yankee to its design and licensing bases including appropriate reviews at the site and corporate offices; (2) independently assess operational safety performance giving risk perspectives where appropriate; (3) evaluate the effectiveness of licensee self-assessments, corrective actions, and improvement plans; (4) determine the root cause(s) of safety-significant findings and draw conclusions on overall performance.

A Citizen Petition

CAT. #116
Rec. 7/20/05

TO: The Governors and Elected Officials of Vermont, New Hampshire, and Massachusetts

FROM: The undersigned citizens of Vermont, New Hampshire, and Massachusetts

WHEREAS, Louisiana-based Entergy Corporation has applied to super-load nuclear fuel in the Vermont Yankee Nuclear Power Plant at Vernon to 120% of the reactor's original 1973 license, and

- this increase will place new stress on Vermont Yankee's aging components increasing risk of accidents and plant blackouts that could affect the entire state, and;

- The recent NRC Engineering Team Inspection identified 8 significant problems in only 45 systems examined, representing only about 1% of the plant's critical systems. These results indicate that the other 99% of the plant's systems may contain hundreds of other problems that remain unidentified, and;

- a full top-to-bottom examination of Vermont Yankee is prudent, protective and conservative, therefore,

WE NOW SAY, join us in calling for an Independent Safety Assessment of Vermont Yankee¹, similar to those already conducted at aging nuclear plants in Maine and Connecticut.

TO: The Governors and Elected Officials of Vermont, New Hampshire, and Massachusetts

FROM: The undersigned citizens of Vermont, New Hampshire, and Massachusetts

WHEREAS, Louisiana-based Entergy Corporation has applied to super-load nuclear fuel in the Vermont Yankee Nuclear Power Plant at Vernon to 120% of the reactor's original 1973 license, and

- this increase will place new stress on Vermont Yankee's aging components increasing risk of accidents and plant blackouts that could affect the entire state, and;

- The recent NRC Engineering Team Inspection identified 8 significant problems in only 45 systems examined, representing only about 1% of the plant's critical systems. These results indicate that the other 99% of the plant's systems may contain hundreds of other problems that remain unidentified, and;

- a full top-to-bottom examination of Vermont Yankee is prudent, protective and conservative, therefore,

WE NOW SAY, join us in calling for an Independent Safety Assessment of Vermont Yankee¹, similar to those already conducted at aging nuclear plants in Maine and Connecticut.

¹ According to the definitions and parameters provided in the report: Independent Safety Assessment of Maine Yankee Atomic Power Company, October 1996, by the Nuclear Regulatory Commission. This study shall: (1) independently assess the conformance of Vermont Yankee to its design and licensing bases including appropriate reviews at the site and corporate offices; (2) independently assess operational safety performance giving risk perspectives where appropriate; (3) evaluate the effectiveness of licensee self-assessments, corrective actions, and improvement plans; (4) determine the root cause(s) of safety-significant findings and draw conclusions on overall performance.

¹ According to the definitions and parameters provided in the report: Independent Safety Assessment of Maine Yankee Atomic Power Company, October 1996, by the Nuclear Regulatory Commission. This study shall: (1) independently assess the conformance of Vermont Yankee to its design and licensing bases including appropriate reviews at the site and corporate offices; (2) independently assess operational safety performance giving risk perspectives where appropriate; (3) evaluate the effectiveness of licensee self-assessments, corrective actions, and improvement plans; (4) determine the root cause(s) of safety-significant findings and draw conclusions on overall performance.

A Citizen Petition

TO: The Governors and Elected Officials of Vermont, New Hampshire, and Massachusetts

FROM: The undersigned citizens of Vermont, New Hampshire, and Massachusetts

WHEREAS, Louisiana-based Entergy Corporation has applied to super-load nuclear fuel in the Vermont Yankee Nuclear Power Plant at Vernon to 120% of the reactor's original 1973 license, and

- this increase will place new stress on Vermont Yankee's aging components increasing risk of accidents and plant blackouts that could affect the entire state, and;
- The recent NRC Engineering Team Inspection identified 8 significant problems in only 45 systems examined, **representing only about 1% of the plant's critical systems.** These results indicate that the other 99% of the plant's systems may contain hundreds of other problems that remain unidentified, and;
- a full top-to-bottom examination of Vermont Yankee is prudent, protective and conservative, therefore,

WE NOW SAY, join us in calling for an Independent Safety Assessment of Vermont Yankee¹, similar to those already conducted at aging nuclear plants in Maine and Connecticut.

TO: The Governors and Elected Officials of Vermont, New Hampshire, and Massachusetts

FROM: The undersigned citizens of Vermont, New Hampshire, and Massachusetts

WHEREAS, Louisiana-based Entergy Corporation has applied to super-load nuclear fuel in the Vermont Yankee Nuclear Power Plant at Vernon to 120% of the reactor's original 1973 license, and

- this increase will place new stress on Vermont Yankee's aging components increasing risk of accidents and plant blackouts that could affect the entire state, and;
- The recent NRC Engineering Team Inspection identified 8 significant problems in only 45 systems examined, representing only about 1% of the plant's critical systems. These results indicate that the other 99% of the plant's systems may contain hundreds of other problems that remain unidentified, and;
- a full top-to-bottom examination of Vermont Yankee is prudent, protective and conservative, therefore,

WE NOW SAY, join us in calling for an Independent Safety Assessment of Vermont Yankee¹, similar to those already conducted at aging nuclear plants in Maine and Connecticut.

¹ According to the definitions and parameters provided in the report: Independent Safety Assessment of Maine Yankee Atomic Power Company, October 1996, by the Nuclear Regulatory Commission. This study shall: (1) independently assess the conformance of Vermont Yankee to its design and licensing bases including appropriate reviews at the site and corporate offices; (2) independently assess operational safety performance giving risk perspectives where appropriate; (3) evaluate the effectiveness of licensee self-assessments, corrective actions, and improvement plans; (4) determine the root cause(s) of safety-significant findings and draw conclusions on overall performance.

¹ According to the definitions and parameters provided in the report: Independent Safety Assessment of Maine Yankee Atomic Power Company, October 1996, by the Nuclear Regulatory Commission. This study shall: (1) independently assess the conformance of Vermont Yankee to its design and licensing bases including appropriate reviews at the site and corporate offices; (2) independently assess operational safety performance giving risk perspectives where appropriate; (3) evaluate the effectiveness of licensee self-assessments, corrective actions, and improvement plans; (4) determine the root cause(s) of safety-significant findings and draw conclusions on overall performance.

A Citizen Petition

G1
CAT 1621
Rec. 1127105

TO: The Governors and Elected Officials of Vermont, New Hampshire, and Massachusetts

FROM: The undersigned citizens of Vermont, New Hampshire, and Massachusetts

WHEREAS, Louisiana-based Entergy Corporation has applied to super-load nuclear fuel in the Vermont Yankee Nuclear Power Plant at Vernon to 120% of the reactor's original 1973 license, and

- this increase will place new stress on Vermont Yankee's aging components increasing risk of accidents and plant blackouts that could affect the entire state, and;
- The recent NRC Engineering Team Inspection identified 8 significant problems in only 45 systems examined, **representing only about 1% of the plant's critical systems.** These results indicate that the other 99% of the plant's systems may contain hundreds of other problems that remain unidentified, and;
- a full top-to-bottom examination of Vermont Yankee is prudent, protective and conservative, therefore,

WE NOW SAY, join us in calling for an Independent Safety Assessment of Vermont Yankee¹, similar to those already conducted at aging nuclear plants in Maine and Connecticut.

WHEREAS, Louisiana-based Entergy Corporation has applied to super-load nuclear fuel in the Vermont Yankee Nuclear Power Plant at Vernon to 120% of the reactor's original 1973 license, and

- this increase will place new stress on Vermont Yankee's aging components increasing risk of accidents and plant blackouts that could affect the entire state, and;
- The recent NRC Engineering Team Inspection identified 8 significant problems in only 45 systems examined, representing only about 1% of the plant's critical systems. These results indicate that the other 99% of the plant's systems may contain hundreds of other problems that remain unidentified, and;
- a full top-to-bottom examination of Vermont Yankee is prudent, protective and conservative, therefore,

WE NOW SAY, join us in calling for an Independent Safety Assessment of Vermont Yankee¹, similar to those already conducted at aging nuclear plants in Maine and Connecticut.

¹ According to the definitions and parameters provided in the report: Independent Safety Assessment of Maine Yankee Atomic Power Company, October 1996, by the Nuclear Regulatory Commission. This study shall: (1) independently assess the conformance of Vermont Yankee to its design and licensing bases including appropriate reviews at the site and corporate offices; (2) independently assess operational safety performance giving risk perspectives where appropriate; (3) evaluate the effectiveness of licensee self-assessments, corrective actions, and improvement plans; (4) determine the root cause(s) of safety-significant findings and draw conclusions on overall performance.

A Citizen Petition

CAT: #185
Rec: 8/30/95

TO: The Governors and Elected Officials of Vermont, New Hampshire, and Massachusetts

FROM: The undersigned citizens of Vermont, New Hampshire, and Massachusetts

WHEREAS, Louisiana-based Entergy Corporation has applied to super-load nuclear fuel in the Vermont Yankee Nuclear Power Plant at Vernon to 120% of the reactor's original 1973 license, and

▪ this increase will place new stress on Vermont Yankee's aging components increasing risk of accidents and plant blackouts that could affect the entire state, and:

▪ The recent NRC Engineering Team Inspection identified 8 significant problems in only 45 systems examined, representing only about 1% of the plant's critical systems. These results indicate that the other 99% of the plant's systems may contain hundreds of other problems that remain unidentified, and:

▪ a full top-to-bottom examination of Vermont Yankee is prudent, protective and conservative, therefore,

WE NOW SAY, join us in calling for an Independent Safety Assessment of Vermont Yankee¹, similar to those already conducted at aging nuclear plants in Maine and Connecticut.

¹ According to the definitions and parameters provided in the report: Independent Safety Assessment of Maine Yankee Atomic Power Company, October 1996, by the Nuclear Regulatory Commission. This study shall: (1) independently assess the conformance of Vermont Yankee to its design and licensing bases including appropriate reviews at the site and corporate offices; (2) independently assess operational safety performance giving risk perspectives where appropriate; (3) evaluate the effectiveness of licensee self-assessments, corrective actions, and improvement plans; (4) determine the root cause(s) of safety-significant findings and draw conclusions on overall performance.

A Citizen Petition

CAT. # 208
Rec. 9/19/05
1

TO: The Governors and Elected Officials of Vermont, New Hampshire, and Massachusetts

FROM: The undersigned citizens of Vermont, New Hampshire, and Massachusetts

WHEREAS, Louisiana-based Entergy Corporation has applied to super-load nuclear fuel in the Vermont Yankee Nuclear Power Plant at Vernon to 120% of the reactor's original 1973 license, and

▪ this increase will place new stress on Vermont Yankee's aging components increasing risk of accidents and plant blackouts that could affect the entire state, and:

▪ The recent NRC Engineering Team Inspection identified 8 significant problems in only 45 systems examined, representing only about 1% of the plant's critical systems. These results indicate that the other 99% of the plant's systems may contain hundreds of other problems that remain unidentified, and:

▪ a full top-to-bottom examination of Vermont Yankee is prudent, protective and conservative, therefore,

WE NOW SAY, join us in calling for an Independent Safety Assessment of Vermont Yankee¹, similar to those already conducted at aging nuclear plants in Maine and Connecticut.

¹ According to the definitions and parameters provided in the report: Independent Safety Assessment of Maine Yankee Atomic Power Company, October 1996, by the Nuclear Regulatory Commission. This study shall: (1) independently assess the conformance of Vermont Yankee to its design and licensing bases including appropriate reviews at the site and corporate offices; (2) independently assess operational safety performance giving risk perspectives where appropriate; (3) evaluate the effectiveness of licensee self-assessments, corrective actions, and improvement plans; (4) determine the root cause(s) of safety-significant findings and draw conclusions on overall performance.

A Citizen Petition

TO: The Governors and Elected Officials of Vermont, New Hampshire, and Massachusetts

FROM: The undersigned citizens of Vermont, New Hampshire, and Massachusetts

WHEREAS, Louisiana-based Entergy Corporation has applied to super-load nuclear fuel in the Vermont Yankee Nuclear Power Plant at Vernon to 120% of the reactor's original 1973 license, and

▪ this increase will place new stress on Vermont Yankee's aging components increasing risk of accidents and plant blackouts that could affect the entire state, and:

▪ The recent NRC Engineering Team Inspection identified 8 significant problems in only 45 systems examined, representing only about 1% of the plant's critical systems. These results indicate that the other 99% of the plant's systems may contain hundreds of other problems that remain unidentified, and:

▪ a full top-to-bottom examination of Vermont Yankee is prudent, protective and conservative, therefore,

WE NOW SAY, join us in calling for an Independent Safety Assessment of Vermont Yankee¹, similar to those already conducted at aging nuclear plants in Maine and Connecticut.

¹ According to the definitions and parameters provided in the report: Independent Safety Assessment of Maine Yankee Atomic Power Company, October 1996, by the Nuclear Regulatory Commission. This study shall: (1) independently assess the conformance of Vermont Yankee to its design and licensing bases including appropriate reviews at the site and corporate offices; (2) independently assess operational safety performance giving risk perspectives where appropriate; (3) evaluate the effectiveness of licensee self-assessments, corrective actions, and improvement plans; (4) determine the root cause(s) of safety-significant findings and draw conclusions on overall performance.

¹ According to the definitions and parameters provided in the report: Independent Safety Assessment of Maine Yankee Atomic Power Company, October 1996, by the Nuclear Regulatory Commission. This study shall: (1) independently assess the conformance of Vermont Yankee to its design and licensing bases including appropriate reviews at the site and corporate offices; (2) independently assess operational safety performance giving risk perspectives where appropriate; (3) evaluate the effectiveness of licensee self-assessments, corrective actions, and improvement plans; (4) determine the root cause(s) of safety-significant findings and draw conclusions on overall performance.

A Citizen Petition

TO: The Governors and Elected Officials of Vermont, New Hampshire, and Massachusetts

FROM: The undersigned citizens of Vermont, New Hampshire, and Massachusetts

WHEREAS, Louisiana-based Entergy Corporation has applied to super-load nuclear fuel in the Vermont Yankee Nuclear Power Plant at Vernon to 120% of the reactor's original 1973 license, and

- this increase will place new stress on Vermont Yankee's aging components increasing risk of accidents and plant blackouts that could affect the entire state, and;
- The recent NRC Engineering Team Inspection identified 8 significant problems in only 45 systems examined, representing only about 1% of the plant's critical systems. These results indicate that the other 99% of the plant's systems may contain hundreds of other problems that remain unidentified, and;
- a full top-to-bottom examination of Vermont Yankee is prudent, protective and conservative, therefore,

WE NOW SAY, join us in calling for an Independent Safety Assessment of Vermont Yankee¹, similar to those already conducted at aging nuclear plants in Maine and Connecticut.

These results indicate that the other 99% of the plant's systems may contain hundreds of other problems that remain unidentified, and;
- a full top-to-bottom examination of Vermont Yankee is prudent, protective and conservative, therefore,

WE NOW SAY, join us in calling for an Independent Safety Assessment of Vermont Yankee¹, similar to those already conducted at aging nuclear plants in Maine and Connecticut.

¹ According to the definitions and parameters provided in the report: Independent Safety Assessment of Maine Yankee Atomic Power Company, October 1996, by the Nuclear Regulatory Commission. This study shall: (1) independently assess the conformance of Vermont Yankee to its design and licensing bases including appropriate reviews at the site and corporate offices; (2) independently assess operational safety performance giving risk perspectives where appropriate; (3) evaluate the effectiveness of licensee self-assessments, corrective actions, and improvement plans; (4) determine the root cause(s) of safety-significant findings and draw conclusions on overall performance.

A Citizen Petition

TO: The Governors and Elected Officials of Vermont, New Hampshire, and Massachusetts

FROM: The undersigned citizens of Vermont, New Hampshire, and Massachusetts

WHEREAS, Louisiana-based Entergy Corporation has applied to super-load nuclear fuel in the Vermont Yankee Nuclear Power Plant at Vernon to 120% of the reactor's original 1973 license, and

- this increase will place new stress on Vermont Yankee's aging components increasing risk of accidents and plant blackouts that could affect the entire state, and;
- The recent NRC Engineering Team Inspection identified 8 significant problems in only 45 systems examined, representing only about 1% of the plant's critical systems. These results indicate that the other 99% of the plant's systems may contain hundreds of other problems that remain unidentified, and;
- a full top-to-bottom examination of Vermont Yankee is prudent, protective and conservative, therefore,

WE NOW SAY, join us in calling for an Independent Safety Assessment of Vermont Yankee¹, similar to those already conducted at aging nuclear plants in Maine and Connecticut.

TO: The Governors and Elected Officials of Vermont, New Hampshire, and Massachusetts

FROM: The undersigned citizens of Vermont, New Hampshire, and Massachusetts

WHEREAS, Louisiana-based Entergy Corporation has applied to super-load nuclear fuel in the Vermont Yankee Nuclear Power Plant at Vernon to 120% of the reactor's original 1973 license, and

- this increase will place new stress on Vermont Yankee's aging components increasing risk of accidents and plant blackouts that could affect the entire state, and;

- The recent NRC Engineering Team Inspection identified 8 significant problems in only 45 systems examined, representing only about 1% of the plant's critical systems. These results indicate that the other 99% of the plant's systems may contain hundreds of other problems that remain unidentified, and;

- a full top-to-bottom examination of Vermont Yankee is prudent, protective and conservative, therefore,

WE NOW SAY, join us in calling for an Independent Safety Assessment of Vermont Yankee¹, similar to those already conducted at aging nuclear plants in Maine and Connecticut.

¹ According to the definitions and parameters provided in the report: Independent Safety Assessment of Maine Yankee Atomic Power Company, October 1996, by the Nuclear Regulatory Commission. This study shall: (1) independently assess the conformance of Vermont Yankee to its design and licensing bases including appropriate reviews at the site and corporate offices; (2) independently assess operational safety performance giving risk perspectives where appropriate; (3) evaluate the effectiveness of licensee self-assessments, corrective actions, and improvement plans; (4) determine the root cause(s) of safety-significant findings and draw conclusions on overall performance.

¹ According to the definitions and parameters provided in the report: Independent Safety Assessment of Maine Yankee Atomic Power Company, October 1996, by the Nuclear Regulatory Commission. This study shall: (1) independently assess the conformance of Vermont Yankee to its design and licensing bases including appropriate reviews at the site and corporate offices; (2) independently assess operational safety performance giving risk perspectives where appropriate; (3) evaluate the effectiveness of licensee self-assessments, corrective actions, and improvement plans; (4) determine the root cause(s) of safety-significant findings and draw conclusions on overall performance.

A Citizen Petition

CAT: #297

7/15/05

TO: The Governors and Elected Officials of Vermont, New Hampshire, and Massachusetts

FROM: The undersigned citizens of Vermont, New Hampshire, and Massachusetts

WHEREAS, Louisiana-based Entergy Corporation has applied to super-load nuclear fuel in the Vermont Yankee Nuclear Power Plant at Vernon to 120% of the reactor's original 1973 license, and

▪ this increase will place new stress on Vermont Yankee's aging components increasing risk of accidents and plant blackouts that could affect the entire state, and:

▪ The recent NRC Engineering Team Inspection identified 8 significant problems in only 45 systems examined, representing only about 1% of the plant's critical systems. These results indicate that the other 99% of the plant's systems may contain hundreds of other problems that remain unidentified, and:

▪ a full top-to-bottom examination of Vermont Yankee is prudent, protective and conservative, therefore,

WE NOW SAY, join us in calling for an Independent Safety Assessment of Vermont Yankee¹, similar to those already conducted at aging nuclear plants in Maine and Connecticut.

These results indicate that the other 99% of the plant's systems may contain hundreds of other problems that remain unidentified, and;
- a full top-to-bottom examination of Vermont Yankee is prudent, protective and conservative, therefore,

WE NOW SAY, join us in calling for an Independent Safety Assessment of Vermont Yankee¹, similar to those already conducted at aging nuclear plants in Maine and Connecticut.

¹ According to the definitions and parameters provided in the report: Independent Safety Assessment of Maine Yankee Atomic Power Company, October 1996, by the Nuclear Regulatory Commission. This study shall: (1) independently assess the conformance of Vermont Yankee to its design and licensing bases including appropriate reviews at the site and corporate offices; (2) independently assess operational safety performance giving risk perspectives where appropriate; (3) evaluate the effectiveness of licensee self-assessments, corrective actions, and improvement plans; (4) determine the root cause(s) of safety-significant findings and draw conclusions on overall performance.

A Citizen Petition

CAT: #289
9/19/05

TO: The Governors and Elected Officials of Vermont, New Hampshire, and Massachusetts

FROM: The undersigned citizens of Vermont, New Hampshire, and Massachusetts

WHEREAS, Louisiana-based Entergy Corporation has applied to super-load nuclear fuel in the Vermont Yankee Nuclear Power Plant at Vernon to 120% of the reactor's original 1973 license, and

▪ this increase will place new stress on Vermont Yankee's aging components increasing risk of accidents and plant blackouts that could affect the entire state, and:

▪ The recent NRC Engineering Team Inspection identified 8 significant problems in only 45 systems examined, representing only about 1% of the plant's critical systems. These results indicate that the other 99% of the plant's systems may contain hundreds of other problems that remain unidentified, and:

▪ a full top-to-bottom examination of Vermont Yankee is prudent, protective and conservative, therefore,

WE NOW SAY, join us in calling for an Independent Safety Assessment of Vermont Yankee¹, similar to those already conducted at aging nuclear plants in Maine and Connecticut.

¹ According to the definitions and parameters provided in the report: Independent Safety Assessment of Maine Yankee Atomic Power Company, October 1996, by the Nuclear Regulatory Commission. This study shall: (1) independently assess the conformance of Vermont Yankee to its design and licensing bases including appropriate reviews at the site and corporate offices; (2) independently assess operational safety performance giving risk perspectives where appropriate; (3) evaluate the effectiveness of licensee self-assessments, corrective actions, and improvement plans; (4) determine the root cause(s) of safety-significant findings and draw conclusions on overall performance.

A Citizen Petition

TO: The Governors and Elected Officials of Vermont, New Hampshire, and Massachusetts

FROM: The undersigned citizens of Vermont, New Hampshire, and Massachusetts

WHEREAS, Louisiana-based Entergy Corporation has applied to super-load nuclear fuel in the Vermont Yankee Nuclear Power Plant at Vernon to 120% of the reactor's original 1973 license, and

- this increase will place new stress on Vermont Yankee's aging components increasing risk of accidents and plant blackouts that could affect the entire state, and;
- The recent NRC Engineering Team Inspection identified 8 significant problems in only 45 systems examined, **representing only about 1% of the plant's critical systems.** These results indicate that the other 99% of the plant's systems may contain hundreds of other problems that remain unidentified, and;
- a full top-to-bottom examination of Vermont Yankee is prudent, protective and conservative, therefore,

WE NOW SAY, join us in calling for an Independent Safety Assessment of Vermont Yankee¹, similar to those already conducted at aging nuclear plants in Maine and Connecticut.

¹ According to the definitions and parameters provided in the report: Independent Safety Assessment of Maine Yankee Atomic Power Company, October 1996, by the Nuclear Regulatory Commission. This study shall: (1) independently assess the conformance of Vermont Yankee to its design and licensing bases including appropriate reviews at the site and corporate offices; (2) independently assess operational safety performance giving risk perspectives where appropriate; (3) evaluate the effectiveness of licensee self-assessments, corrective actions, and improvement plans; (4) determine the root cause(s) of safety-significant findings and draw conclusions on overall performance.

A Citizen Petition

TO: The Governors and Elected Officials of Vermont, New Hampshire, and Massachusetts

FROM: The undersigned citizens of Vermont, New Hampshire, and Massachusetts

WHEREAS, Louisiana-based Entergy Corporation has applied to super-load nuclear fuel in the Vermont Yankee Nuclear Power Plant at Vernon to 120% of the reactor's original 1973 license, and

- this increase will place new stress on Vermont Yankee's aging components increasing risk of accidents and plant blackouts that could affect the entire state, and;
- The recent NRC Engineering Team Inspection identified 8 significant problems in only 45 systems examined, **representing only about 1% of the plant's critical systems.** These results indicate that the other 99% of the plant's systems may contain hundreds of other problems that remain unidentified, and;
- a full top-to-bottom examination of Vermont Yankee is prudent, protective and conservative, therefore,

WE NOW SAY, join us in calling for an Independent Safety Assessment of Vermont Yankee¹, similar to those already conducted at aging nuclear plants in Maine and Connecticut.

FROM: The undersigned citizens of Vermont, New Hampshire, and Massachusetts

WHEREAS, Louisiana-based Entergy Corporation has applied to super-load nuclear fuel in the Vermont Yankee Nuclear Power Plant at Vernon to 120% of the reactor's original 1973 license, and

▪ this increase will place new stress on Vermont Yankee's aging components increasing risk of accidents and plant blackouts that could affect the entire state, and:

▪ The recent NRC Engineering Team Inspection identified 8 significant problems in only 45 systems examined, representing only about 1% of the plant's critical systems. These results indicate that the other 99% of the plant's systems may contain hundreds of other problems that remain unidentified, and:

▪ a full top-to-bottom examination of Vermont Yankee is prudent, protective and conservative, therefore,

WE NOW SAY, join us in calling for an Independent Safety Assessment of Vermont Yankee¹, similar to those already conducted at aging nuclear plants in Maine and Connecticut.

¹ According to the definitions and parameters provided in the report: Independent Safety Assessment of Maine Yankee Atomic Power Company, October 1996, by the Nuclear Regulatory Commission. This study shall: (1) independently assess the conformance of Vermont Yankee to its design and licensing bases including appropriate reviews at the site and corporate offices; (2) independently assess operational safety performance giving risk perspectives where appropriate; (3) evaluate the effectiveness of licensee self-assessments, corrective actions, and improvement plans; (4) determine the root cause(s) of safety-significant findings and draw conclusions on overall performance.

A Citizen Petition

CAT. # 336
Rec. 11/23/05

TO: The Governors and Elected Officials of Vermont, New Hampshire, and Massachusetts

FROM: The undersigned citizens of Vermont, New Hampshire, and Massachusetts

WHEREAS, Louisiana-based Entergy Corporation has applied to super-load nuclear fuel in the Vermont Yankee Nuclear Power Plant at Vernon to 120% of the reactor's original 1973 license, and

- this increase will place new stress on Vermont Yankee's aging components increasing risk of accidents and plant blackouts that could affect the entire state, and;
- The recent NRC Engineering Team Inspection identified 8 significant problems in only 45 systems examined, **representing only about 1% of the plant's critical systems.** These results indicate that the other 99% of the plant's systems may contain hundreds of other problems that remain unidentified, and;
- a full top-to-bottom examination of Vermont Yankee is prudent, protective and conservative, therefore,

WE NOW SAY, join us in calling for an Independent Safety Assessment of Vermont Yankee¹, similar to those already conducted at aging nuclear plants in Maine and Connecticut.

¹ According to the definitions and parameters provided in the report: Independent Safety Assessment of Maine Yankee Atomic Power Company, October 1996, by the Nuclear Regulatory Commission. This study shall: (1) independently assess the conformance of Vermont Yankee to its design and licensing bases including appropriate reviews at the site and corporate offices; (2) independently assess operational safety performance giving risk perspectives where appropriate; (3) evaluate the effectiveness of licensee self-assessments, corrective actions, and improvement plans; (4) determine the root cause(s) of safety-significant findings and draw conclusions on overall performance.

A Citizen Petition

CAT 347

2/7/06

TO: The Governors and Elected Officials of Vermont, New Hampshire, and Massachusetts

FROM: The undersigned citizens of Vermont, New Hampshire, and Massachusetts

WHEREAS, Louisiana-based Entergy Corporation has applied to super-load nuclear fuel in the Vermont Yankee Nuclear Power Plant at Vernon to 120% of the reactor's original 1973 license, and

- this increase will place new stress on Vermont Yankee's aging components increasing risk of accidents and plant blackouts that could affect the entire state, and;

- The recent NRC Engineering Team Inspection identified 8 significant problems in only 45 systems examined, representing only about 1% of the plant's critical systems. These results indicate that the other 99% of the plant's systems may contain hundreds of other problems that remain unidentified, and;

- a full top-to-bottom examination of Vermont Yankee is prudent, protective and conservative, therefore,

WE NOW SAY, join us in calling for an Independent Safety Assessment of Vermont Yankee¹, similar to those already conducted at aging nuclear plants in Maine and Connecticut.

¹ According to the definitions and parameters provided in the report: Independent Safety Assessment of Maine Yankee Atomic Power Company, October 1996, by the Nuclear Regulatory Commission. This study shall: (1) independently assess the conformance of Vermont Yankee to its design and licensing bases including appropriate reviews at the site and corporate offices; (2) independently assess operational safety performance giving risk perspectives where appropriate; (3) evaluate the effectiveness of licensee self-assessments, corrective actions, and improvement plans; (4) determine the root cause(s) of safety-significant findings and draw conclusions on overall performance.

2

A Citizen Petition

TO: The Governors and Elected Officials of Vermont, New Hampshire, and Massachusetts

FROM: The undersigned citizens of Vermont, New Hampshire, and Massachusetts

WHEREAS, Louisiana-based Entergy Corporation has applied to super-load nuclear fuel in the Vermont Yankee Nuclear Power Plant at Vernon to 120% of the reactor's original 1973 license, and

▪ this increase will place new stress on Vermont Yankee's aging components increasing risk of accidents and plant blackouts that could affect the entire state, and:

▪ The recent NRC Engineering Team Inspection identified 8 significant problems in only 45 systems examined, representing only about 1% of the plant's critical systems. These results indicate that the other 99% of the plant's systems may contain hundreds of other problems that remain unidentified, and:

▪ a full top-to-bottom examination of Vermont Yankee is prudent, protective and conservative, therefore,

WE NOW SAY, join us in calling for an Independent Safety Assessment of Vermont Yankee¹, similar to those already conducted at aging nuclear plants in Maine and Connecticut.

This study shall: (1) independently assess the conformance of Vermont Yankee to its design and licensing bases including appropriate reviews at the site and corporate offices; (2) independently assess operational safety performance giving risk perspectives where appropriate; (3) evaluate the effectiveness of licensee self-assessments, corrective actions, and improvement plans; (4) determine the root cause(s) of safety-significant findings and draw conclusions on overall performance.

A Citizen Petition

TO: The Governors and Elected Officials of Vermont, New Hampshire, and Massachusetts

FROM: The undersigned citizens of Vermont, New Hampshire, and Massachusetts

WHEREAS, Louisiana-based Entergy Corporation has applied to super-load nuclear fuel in the Vermont Yankee Nuclear Power Plant at Vernon to 120% of the reactor's original 1973 license, and

▪ this increase will place new stress on Vermont Yankee's aging components increasing risk of accidents and plant blackouts that could affect the entire state, and:

▪ The recent NRC Engineering Team Inspection identified 8 significant problems in only 45 systems examined, representing only about 1% of the plant's critical systems. These results indicate that the other 99% of the plant's systems may contain hundreds of other problems that remain unidentified, and:

▪ a full top-to-bottom examination of Vermont Yankee is prudent, protective and conservative, therefore,

WE NOW SAY, join us in calling for an **Independent Safety Assessment of Vermont Yankee¹**, similar to those already conducted at aging nuclear plants in Maine and Connecticut.

WHEREAS, Louisiana-based Entergy Corporation has applied to super-load nuclear fuel in the Vermont Yankee Nuclear Power Plant at Vernon to 120% of the reactor's original 1973 license, and

▪ this increase will place new stress on Vermont Yankee's aging components increasing risk of accidents and plant blackouts that could affect the entire state, and:

▪ The recent NRC Engineering Team Inspection identified 8 significant problems in only 45 systems examined, representing only about 1% of the plant's critical systems. These results indicate that the other 99% of the plant's systems may contain hundreds of other problems that remain unidentified, and:

▪ a full top-to-bottom examination of Vermont Yankee is prudent, protective and conservative, therefore,

WE NOW SAY, join us in calling for an Independent Safety Assessment of Vermont Yankee¹, similar to those already conducted at aging nuclear plants in Maine and Connecticut.

¹ According to the definitions and parameters provided in the report: Independent Safety Assessment of Maine Yankee Atomic Power Company, October 1996, by the Nuclear Regulatory Commission. This study shall: (1) independently assess the conformance of Vermont Yankee to its design and licensing bases including appropriate reviews at the site and corporate offices; (2) independently assess operational safety performance giving risk perspectives where appropriate; (3) evaluate the effectiveness of licensee self-assessments, corrective actions, and improvement plans; (4) determine the root cause(s) of safety-significant findings and draw conclusions on overall performance.

A Citizen Petition

TO: The Governors and Elected Officials of Vermont, New Hampshire, and Massachusetts

FROM: The undersigned citizens of Vermont, New Hampshire, and Massachusetts

WHEREAS, Louisiana-based Entergy Corporation has applied to super-load nuclear fuel in the Vermont Yankee Nuclear Power Plant at Vernon to 120% of the reactor's original 1973 license, and

- this increase will place new stress on Vermont Yankee's aging components increasing risk of accidents and plant blackouts that could affect the entire state, and;
- The recent NRC Engineering Team Inspection identified 8 significant problems in only 45 systems examined, representing only about 1% of the plant's critical systems. These results indicate that the other 99% of the plant's systems may contain hundreds of other problems that remain unidentified, and;
- a full top-to-bottom examination of Vermont Yankee is prudent, protective and conservative, therefore,

WE NOW SAY, join us in calling for an Independent Safety Assessment of Vermont Yankee¹, similar to those already conducted at aging nuclear plants in Maine and Connecticut.

¹ According to the definitions and parameters provided in the report: Independent Safety Assessment of Maine Yankee Atomic Power Company, October 1996, by the Nuclear Regulatory Commission. This study shall: (1) independently assess the conformance of Vermont Yankee to its design and licensing bases including appropriate reviews at the site and corporate offices; (2) independently assess operational safety performance giving risk perspectives where appropriate; (3) evaluate the effectiveness of licensee self-assessments, corrective actions, and improvement plans; (4) determine the root cause(s) of safety-significant findings and draw conclusions on overall performance.

A Citizen Petition

TO: The Governors and Elected Officials of Vermont, New Hampshire, and Massachusetts

FROM: The undersigned citizens of Vermont, New Hampshire, and Massachusetts

WHEREAS, Louisiana-based Entergy Corporation has applied to super-load nuclear fuel in the Vermont Yankee Nuclear Power Plant at Vernon to 120% of the reactor's original 1973 license, and

▪ this increase will place new stress on Vermont Yankee's aging components increasing risk of accidents and plant blackouts that could affect the entire state, and:

▪ The recent NRC Engineering Team Inspection identified 8 significant problems in only 45 systems examined, representing only about 1% of the plant's critical systems. These results indicate that the other 99% of the plant's systems may contain hundreds of other problems that remain unidentified, and:

▪ a full top-to-bottom examination of Vermont Yankee is prudent, protective and conservative, therefore,

WE NOW SAY, join us in calling for an Independent Safety Assessment of Vermont Yankee¹, similar to those already conducted at aging nuclear plants in Maine and Connecticut.

- this increase will place new stress on Vermont Yankee's aging components increasing risk of accidents and plant blackouts that could affect the entire state, and;
- The recent NRC Engineering Team Inspection identified 8 significant problems in only 45 systems examined, representing only about 1% of the plant's critical systems. These results indicate that the other 99% of the plant's systems may contain hundreds of other problems that remain unidentified, and;
- a full top-to-bottom examination of Vermont Yankee is prudent, protective and conservative, therefore,

WE NOW SAY, join us in calling for an Independent Safety Assessment of Vermont Yankee¹, similar to those already conducted at aging nuclear plants in Maine and Connecticut.

¹ According to the definitions and parameters provided in the report: Independent Safety Assessment of Maine Yankee Atomic Power Company, October 1996, by the Nuclear Regulatory Commission. This study shall: (1) independently assess the conformance of Vermont Yankee to its design and licensing bases including appropriate reviews at the site and corporate offices; (2) independently assess operational safety performance giving risk perspectives where appropriate; (3) evaluate the effectiveness of licensee self-assessments, corrective actions, and improvement plans; (4) determine the root cause(s) of safety-significant findings and draw conclusions on overall performance.
