Subject: RE: Comment/Response for NMP

I reviewed the NMP-2 USAR regarding the depression cone. The cone is located within approximately 300 ft of the reactor building, the area of interest is over 1200 ft away; therefore the statement is correct. The spill area is ~60 x 75 ft per GEOMATRIX's report. Finally, the majority of the volatiles that were identified as being above the "STARS" limits are now less than detectable (11/2/05); however, additional samples need to be collected and analyzed prior to closing spill.

If you have any additional questions, please give me a call.

Kent

Kent,

Please review and confirm content of responses in the attached document.

Don't worry about the third comment. I have it covered.

Thanks,

Dave

Subject: Test email

Hi Kent,

Please reply at your convenience.

I'll have the material we described emailed to you by tomorrow AM.

Thanks,

Dave
