I am Pamela Bengé, District Representative for Congressman Steve Pearce.

I would like to thank the NRC Licensing Board for presiding over the National Enrichment Facility licensing proceedings. I am confident the Nuclear Regulatory Commission process will assure the NEF will be safe.

The Final Environmental Impact Statement issued by the NRC on June, 15, 2005, determined that the NEF will have minimal environmental impact, but will have a positive socioeconomic impact, providing jobs and revenue to the local economy. The EIS stated "The NRC staff recommends that, unless safety issues mandate otherwise, the proposed license be issued to LES." This is a very strong statement by the NRC.

The NEF will help provide energy independence for the United States as an additional, reliable and economical domestic source of enrichment services. The NEF will contribute to our nation's energy security needs. NEF will provide a sustainable domestic supply of low enriched uranium, thereby substantially reducing U.S. reliance on the global nuclear fuel marketplace and encouraging competition within the U.S. market.

The Safety Evaluation Report issued by the NRC on June 15, 2005 stated "operation of the facility does not pose an undue risk to worker and public health and safety." (page iii of the SER) The NRC staff stated, "The plans and commitments described in the application provide reasonable assurance that an acceptable organization, administrative policies and sufficient competent resources have been established or committed for the design, construction and safe operation of the facility." (page xv of the SER)

LES has been open and honest about the NEF operations, and have kept our office as well as the county and communities informed about each step of the process. The NEF is the world's most advanced, energy-efficient and cost-effective uranium enrichment technology. It is a safe process that has been in use for more than 30 years. The proposed LES facility is both safe and environmentally sound, as attested to by the NRC in many documents.

LES has been upfront with the citizens of Lea County and the state of New Mexico in the disposal and deconversion, and disposed of in existing low-level radioactive waste facilities outside of the state.

Mr. Chairman, let me reiterate Congressman Pearce's strong support for the license being issues to LES for the National Enrichment Facility in Lea County.

Thank you.
