Dear Tony Go:

This letter contains the supporting information to a conversation with Mr. Edward Johnston for the transfer of five C-137 brachytherapy sources from North Florida Regional Medical Center to Terre Haute Regional Hospital. A copy of our NRC license has been mailed to the Florida Medical Center. The current leak test report is in our possession. The sources will be transported via Federal Express or similar licensed carrier. The sources will be placed in original C-137 D.O.T. approved containers and will comply with all applicable radioactive materials transportation regulations. Mr. Johnston called the state of Florida, Department of Radiation Control and the only additional item requested was a letter after the transfer is completed confirming that Terre Haute Regional has possession of the sources.

If you need any additional information please call Chris Newlin at the above number.

Sincerely,

A handwritten signature in black ink, appearing to read "Ayman Ghoniem", written over a horizontal line.

Ayman Ghoniem, M.D., RSO
Director, Radiology Department
