

July 11, 2006

LICENSEE: Entergy Nuclear Operations, Inc

FACILITY: Vermont Yankee Nuclear Power Station

SUBJECT: SUMMARY OF ENVIRONMENTAL SITE AUDIT RELATED TO THE REVIEW
OF THE LICENSE RENEWAL APPLICATION FOR VERMONT YANKEE
NUCLEAR POWER STATION (TAC NOS. MC9670)

From May 23, 2006 to May 26, 2006, a review team consisting of the U.S. Nuclear Regulatory Commission (NRC) staff and contractors from Argonne National Laboratory (ANL) participated in a site audit at the Vermont Yankee Nuclear Power Station (VYNPS), related to the environmental review of the VYNPS license renewal application (LRA). The team consisted of ten ANL contractors and ten NRC staff members. The primary goal of the site visit was to review documentation, gather information to ensure that environmental requirements of license renewal as codified in Title 10 of the *Code of Federal Regulations* Part 51 (10 CFR Part 51) are met, and to interface with officials in Federal, State and local government agencies to obtain related information.

Enclosure 1 is a list of NRC, ANL, State of Vermont, and Entergy Nuclear Operations, Inc. (Entergy) representatives who participated in the site audit. Enclosure 2 is a table of documents provided by Entergy to assist the NRC staff in its review of the VYNPS Environmental Report. These documents are publicly available, and can be found at the Agencywide Documents Access and Management System (ADAMS); the accession numbers are listed in Enclosure 2. ADAMS is accessible at <http://adamswebsearch.nrc.gov/dologin.htm> or through the NRC's Electronic Reading Room link at <http://www.nrc.gov>. Persons who do not have access to ADAMS, or who encounter problems in accessing the documents located in ADAMS, should contact the NRC's Public Document Room staff at 1-800-397-4209, or 301-415-4737, or by e-mail at pdr@nrc.gov.

On Tuesday, May 23, 2006, the environmental review team participated in a general site tour of the VYNPS site with Entergy staff. The general site tour focused on areas relevant to the environmental review, including the intake structure, discharge structure, cooling towers, meteorological towers, water sampling locations, site structures, the Vernon Hydroelectric Station, and the site environs. During the rest of the site audit, the team members examined the data used by Entergy in preparation of the Environmental Report and also met with Entergy representatives with corresponding environmental expertise in smaller groups.

These groups participated in various activities, including tours of the radioactive waste processing areas, the meteorological tower and instruments, the transmission line rights of way, and the intake structure. During a boat tour, team members examined the intake structure, the intake bays, the discharge structure, and the Vernon Hydroelectric Station.

Team members met onsite with officials from the Vermont Agency for Natural Resources, the Vermont Department of Health, and with a representative of the U.S. Fish and Wildlife Service. Additionally, team members met offsite with non-governmental organizations (e.g., Realtors, chambers of commerce), State officials in Montpelier, Vermont, and local government officials in Vermont, New Hampshire, and Massachusetts. Information gathered through these offsite meetings will assist the environmental review team in its evaluation. Entergy representatives provided a brief presentation on its process for identifying new and significant information. No new and significant information was identified by Entergy.

At the conclusion of the site visit, the NRC staff and ANL contractors summarized the status of the review with Entergy representatives. NRC indicated that additional information will be needed to evaluate if any of the transmission lines exiting the site would be considered to be in-scope for evaluating environmental impacts for license renewal at VYNPS. Entergy representatives indicated that the transmission lines would have been constructed at the site even if VYNPS was never constructed, because of the need to connect Vermont to the New Hampshire and Massachusetts grids. Entergy further stated that it would provide documentation to support that position. The environmental report submitted by Entergy as part of the LRA, did not consider any of the transmission lines exiting the site to be in-scope.

The NRC staff indicated that, the review team did not identify any significant issues during its site visit or during offsite visits with Federal, State, and local agencies. However, the NRC staff further indicated that the review was ongoing and that any additional information necessary to support the review would be formally requested as a request for additional information.
