Re: Braidwood...We've been giving some technical assistance to Region I for a tritium issue emanating from a spent fuel pool leak. We have developed and we maintain very sophisticated ground water intrusion/contamination models that can be used to look at the extent and timing of the movement of isotopes like tritium through the ground. If you think it would be helpful, have your staff contact Tom Nicholson, the SL for this stuff at 301-415-6268. Tom reports to Christiana Liu, the BC.
