John - Please develop a response to Pete's comments. His comments are relative to the his document that you revised yesterday - I'd like to get him the feedback and close this out this am. We have ongoing inspection into what they did in 1998/2000 so we will want to add that caveat.

Also, Marty Virgilio would like for us to develop a Q&A for the comm plan for the following question. We can work with Roland/Jan on this:

Question: The State of Illinois has issued a number of violations to Braidwood. What is the NRC's view or role associated with the state's issuance of the violations?

I still have the comm plan so we can add it before it goes to Reynolds.

Thanks Anne,
The one feedback item on the comments.....I think we want to specifically discuss Braidwood's RETS limits. The limits should focus on tritium in the drinking water supply (i.e. gaseous limits and dose to organs should be eliminated)..I think we should try to put in perspective either the Appendix I or 10 CFR 20 limits based upon practical applications (i.e. concentration of X pci/L, taken internally of this amount would result in X mrem/yr or Y mrem/quarter.....

out of scope

[REDACTED]

Thanks for all of your help and have a good new year.....

Pete - We took a look at your document and would offer a few comments. See what you think and give me a call if you have questions. I am also attaching the latest version of the comm plan which addresses some of the issues (note - its still in concurrence).
