APPE 26
R III

Steve,

The EDO's office is interested in knowing what transpired during the meeting with the State of Illinois, EPA. [REDACTED] Also, the upcoming meeting with the nearby residents is just public outreach or is there any concern on part of the residents. Can you provide me some information? Also, please include Robert Kuntz in the communication plan since he will be taking over as the PM for Byron/Braidwood in the near future. Thanks

Greetings,

We are in the process of developing an update to the Braidwood Preliminary Notification. The purpose of this update is to provide NRC independent sample results, which have validated the accuracy of the licensee's measurements. Additionally, the PN will include the results from deeper wells (25' deep) that have been in the range of 220,000 - 285,000 picoCuries per liter of tritium (offsite and onsite, respectively). We are hopeful to have the PN in final form this afternoon.

The licensee is finalizing its schedule of meeting for next week:

- Monday, January 23 with the State of Illinois EPA, etc.
- Thursday, January 26 with the nearby residents

Members of the Region III staff plan to attend both meetings.

Thank you,

Steven Orth

Rel. NLR

CC: Robert Kuntz
