Glen Allen, Virginia 23060

RE: Surry Power Station:
Application for Reissuance of VPDES Permit No. VA0004090

Dear Mr. Jenkins:

Enclosed are revised versions of the following sections of the subject permit application, which was submitted to your office by my cover letter dated April 25, 2006:

- Application Addendum
- Sludge Application Form
- FORM 2C

These sections of the application were modified in response to the questions and comments raised in your June 12, 2006 letter to Ken Roller of my staff. A description of the specific changes made to each section is provided in the attached Table 1.

Please feel free to contact Ken Roller of my staff should you have any questions or concerns related to this submittal.

Sincerely,

Pamela F. Faggert

Enclosures

NRC Senior Resident Inspector
Surry Power Station

ADDENDUM TO APPLICATION FORM 1

ITEM XI. MAP

A topographic map showing the location of the Surry Power Station property boundary is included with this application. An aerial photo showing the location of the currently permitted VPDES discharges is included as a supplement to the topographic map. Once-through non-contact cooling water is withdrawn from the James River through the station's "low level" cooling water intake structure, which is located on the eastern side of Hog Island. The water is then directed to an elevated intake canal where it flows by gravity towards the station's "high level" intake structure, which is located at the western end of the canal. The entire length of the "high level" intake canal can be seen on the topographic map included with this submittal. A portion of the intake canal is visible on the aerial photograph. The facility does not have any underground injection wells, and is not a hazardous waste TSD facility.

ADDENDUM TO APPLICATION FORM 2C

Item II-A (Line drawing)

A line drawing is attached, which shows the general route taken by water from intake to discharge. The flows shown for each outfall are average flows, which were determined using flow measurements for each discharge taken during the period from February 1, 2003 through January 31, 2006 (see Item V for additional information). Water inflow and outflow is typically dependent upon the time of year and generating output. Some water is also lost to evaporation.

The majority of the water used at the Surry Power Station is once-through non-contact cooling water, which is withdrawn from, and returned to, the James River. Because of the brackish nature of the James River, however, the station also operates several groundwater withdrawal wells that supply water to a number of station processes that require freshwater (e.g., steam generators and potable water). Wastewaters generated by these processes are channeled to the station's discharge canal where they are combined with the once-through cooling water prior to discharge to the James River via Outfall 001.

Groundwater withdrawals by the Surry Power Station are permitted under Virginia Groundwater Withdrawal Permit GW0003900. The station is currently evaluating the possibility of increasing groundwater withdrawals as part of a process to minimize deterioration of the steam generator infrastructure. It is anticipated that modification of the existing groundwater withdrawal permit will be necessary in order to withdraw the amount of water that will be required.

The corrosion minimization process will involve bypass of the existing condensate polishing system in order to optimize pH levels within the secondary system. Bypassing of the condensate polishing system will necessitate operation in an open-cycle mode, which will result in an increase in the amount of steam generator blowdown that is released to the discharge canal through Outfall 114 (Unit 1) and Outfall 115 (Unit 2). There are three steam generators associated with each of the two electricity generating units at the Surry Power Station. Assuming that all six steam generators are operating concurrently, the typical blowdown flow, following implementation of the pH optimization process, is estimated to be between 0.260 and 0.600 MGD. Under upset conditions during the cleaning of a fouled steam generator, flows could increase to 100 gpm per generator.

Item II-B (Outfall Description)

The average flows shown for each outfall were determined using flow measurements taken during the period from February 1, 2003 through January 31, 2006.

Outfall 001 is the station's primary external discharge to surface water and consists predominately of once-through non-contact cooling water. Wastewaters generated by various plant processes are released through internal outfalls (101 through 122) to the discharge canal where they become mixed with the non-contact cooling water prior to discharge to the James River. In addition to wastewaters produced at the Surry Power Station, the station's settling pond (internal Outfall 108) also receives treated process wastewater from the Gravel Neck Combustion Turbine Station, which is located southwest of the Surry Power Station.

Industrial processes at the Surry Power Station are conducted under roof and are not exposed to storm water. Consequently, there is no direct discharge of storm water associated with industrial processes. As is shown on the Waste Water Flow Diagram (line drawing), a number of the station's internal discharges are released to either the Unit 1 or Unit 2 storm drains prior to entering the main cooling water discharge canal. Each of the internal wastestreams are monitored prior to release to the storm drains. In addition, releases from the station's fuel oil containment berm (Outfall 105) are monitored prior to release to the discharge canal. Other storm water routes or conveyances around the station property are not subject to contamination from the industrial activities conducted at Surry, and consequently, the station intends to continue the "No Exposure Certification" for these storm water releases.

Once-through non-contact cooling water is withdrawn from the James River through the station's "low level" cooling water intake structure, which is located on the eastern side of Hog Island. The water is then directed to an elevated intake canal where it flows by gravity towards the station's "high level" intake structure located at the western end of the canal. The "low level" intake is equipped with trash racks. Trash and debris that collect on the racks are cleaned by a mechanical rack and are not returned to the river. The intakes are also equipped with Ristroph screens to prevent the entrainment of fish into the cooling water system. Fish that become impinged on the intake screens are returned to

the river through a system that utilizes low pressure nozzles that spray water across the intake screens and a fish return trough that returns the fish safely away from the intake structure.

Outfall 002 is the only other direct discharge to surface waters and consists of storm water that collects in an oil tank containment associated with the Gravel Neck Combustion Turbine Station. Discharge from the containment is small, very infrequent, and enters a man-made ditch far from any natural watercourse.

ITEM II. C. INTERMITTENT OR SEASONAL DISCHARGES.

The data for flow rate and total volume of flow for each discharge were obtained using flow measurements obtained during the period from February 1, 2003 through January 31, 2006. The units for total flow are in million gallons. The duration of each intermittent discharge is < 1 day. Consequently, the maximum and average total flows for these discharges as million gallons per day are equal to the maximum and average daily volumes as million gallons.

Under current station operation Outfalls 114 and 115 are rarely discharged. The flows reported on the Form 2C data forms for these outfalls were generated during the most recent discharge from each outfall, which occurred on January 2003 (114) and July 1999 (115). The station is currently considering a process to minimize deterioration of the stream generator infrastructure that could result in a more continuous discharge from both outfalls (see discussion under ITEM II.A above).

ITEM V – A, B, & C INTAKE AND EFFLUENT CHARACTERISTICS

Effluent samples used to generate the data included in FORM 2C were collected during periods representative of facility operations by persons experienced in the sampling of industrial effluents. The samples were collected in accordance with procedures described in the instructions for FORM 2C as modified by the following waivers approved by DEQ staff (Mr. Ray Jenkins and Dr. Oula Shehab) during a September 27, 2005 meeting, and a November 30, 2005 follow-up call from Dr. Shehab:

- Reporting of winter and summer temperatures was only required for the two external discharges Outfalls 001 and 002.
- Existing DMR data would satisfy the FORM 2C data requirements for all internal discharges except the Sewage Treatment Plant (Outfall 101) and the Settling Pond (Outfall 108).
- For Outfall 101, only FORM 2A parameters (except winter and summer temperatures) and FORM 2C Part B & C parameters would be required.

DEQ staff also agreed that grab samples could be used to generate the data for Outfall 108 provided the retention time of the pond exceeded 24 hours. Using the original settling pond volume and known retention time along with the most recent bathymetric survey data, the current retention time of the pond was determined to be 3.29 days.

Sample analyses were performed in accordance with methods promulgated in 40 CFR Part 136. The data that were used to generate FORM 2C Items V-A.B. and C are described in the table below.

OUTFALL(S)	PARAMETERS	DATA SOURCE
001	Flow, TRC, Total Phosphorous, Total Nitrogen, pH	DMR data February 1, 2003 – January 31, 2006
	Form 2C parameters for which testing is required in VPDES permit condition I.B.20.	Samples were collected December 21, 2004. These data are also being submitted with this permit application on the Attachment A forms as required by the permit.
	Summer temperature	Summer temperature was measured on June 29, 2004.
	Remainder of FORM 2C parameters	Determined using samples collected on January 4, 2006.
101	Flow, pH, temperature (winter), BOD-5, and TSS (FORM 2A parameters).	DMR data for February 1, 2003 – January 31, 2006.
	Fecal coliform (FORM 2A parameter)	Determined using sample collected on January 4, 2006.
	FORM 2C Part B and C parameters.	Determined using samples collected on January 4, 2006.
	DEQ staff agreed that no testing for the remainder of FORM 2C parameters was required on this discharge.	Not Applicable
102 –122 (except 108, 114, and 115)	DEQ staff agreed that because these are all internal discharges that only data for DMR parameters would be required for FORM 2C.	DMR data for period February 1, 2003 – January 31, 2006.
114 & 115	Neither Outfall 114 or 115 discharged during the period from February 1, 2003 through January 31, 2006. The most recent discharges from these outfalls occurred in January 2003 (114) and July 1999 (115).	The DMR data generated during January 2003 for Outfall 114 and during July 1999 for Outfall 115 were used to generate the FORM 2C data forms for these outfalls.
108	DMR parameters	DMR data for period February 1, 2003 – January 31, 2006.
	All other FORM 2C parameters	Determined using samples collected January 4, 2006.
002	DMR parameters	DMR data for period February 1, 2003 – January 31, 2006.

OUTFALL(S)	PARAMETERS	DATA SOURCE
	Summer temperature	No summer temperature data exist for Outfall 002. However, this discharge is from a shallow body of relatively stagnant water. Therefore, a surrogate temperature measurement was obtained from a shallow area of a millpond on the South Anna River near Ashland, Virginia.
	All other FORM 2C parameters	Determined using samples collected January 4, 2006.

TSS (Outfalls 102, 103, 106, 116 and 117):

For DMR purposes, the permit requires determination of the net increase in TSS for each turbine sump discharge (Outfalls 102, 103, 106, 116, and 117). Actual TSS measurements made on these discharges during the period February 1, 2003 and January 31, 2006 were used to generate the TSS concentrations and loadings reported on the Form 2C data forms for these discharges.

Sulfite

No samples were collected or analyzed for sulfite because the pollutant is believed to be absent from our discharges. Sulfite is believed to be fully oxidized in our discharges and would be included in the Sulfate analyses.

ITEM V: FORMS

As allowed by FORM 2C instructions, the required data are being submitted on separate sheets as an attachment to Form 2C. The data sheets we are submitting were computer generated, which greatly shortened the amount of clerical effort needed to prepare the application. The sheets contain the required information in a format consistent with pages V-1 to V-9 in spacing and in identification of pollutants and pollutant columns. The forms were generated with a program written at Dominion using SAS v.9.1.3 using the data described under *ITEM V - A.B. &C: Intake and Effluent Characteristics* above. The calculations were performed as follows:

- Daily maximum concentrations were determined as the highest daily value.
- Daily maximum mass loadings were determined as follows:
 1. Where corresponding concentration and flow data exist for a particular parameter on a particular day, the mass loading for that day was determined using this information.
 2. Where concentration data exist, but there are no corresponding flow data for the date of sampling, the maximum monthly flow reported on the DMR was used to derive the loading for that day.

3. The highest daily maximum loading determined was reported on the Form 2C as the Maximum Daily Mass.
- Maximum 30-day concentrations were determined as the highest monthly average for the monitoring period evaluated.
- Maximum 30-day mass loadings were determined as follows:
 1. Where corresponding concentration and flow data exist for a particular parameter on a particular day, the mass loading for that day was determined using this information.
 2. Where concentration data exist, but there are no corresponding flow data for the sample date, the monthly average flow reported on the DMR for the month during which the effluent concentration was measured was used to derive the loading for that day.
 3. The above data were then used to determine average monthly loadings, and the highest of these values was selected as the Maximum 30-day mass.
- The long-term average concentration was determined as the average of the monthly average concentrations.
- The long-term average mass loading was determined as the average of the monthly average loadings.

ITEM V.D. INTAKE & EFFLUENT CHARACTERISTICS and ITEM VI. POTENTIAL DISCHARGES NOT COVERED BY ANALYSIS

The backwash system associated with Surry's cooling water intake system results in a release of water back to the James River. Fish and small quantities of solids that accumulate on the screens may be present in these releases.

The following is a list of chemicals that are either in use, or that may be used within the next five years at Surry Power Station.

CHEMICALS USED IN STEAM GENERATORS, SECONDARY GENERATORS, SECONDARY SYSTEMS, AND SERVICE WATER	
Hydrazine	Currently added to control oxygen.
Monoethanolamine (ETA)	Added to control pH.
Ammonium hydroxide	Formed in the system by hydrazine decomposition (added for pH).
Carbohydrazide (N ₂ H ₃) ₂ CO	May be used as a replacement for hydrazine.
Dimethylamine (DMA)	May be used for pH control.
Trimethylamine (TMA)	May be used for pH control and as a cleaning agent for steam generators.
Diaminoethane (DAE)	May be used for pH control.

5-aminopentanol (5AP)	May be used for pH control.
Diethylaminoethanol	May be used for pH control.
2-amino-2-methyl-1-propanol (AMP)	May be used for pH control.
Morpholine	May be used for pH control.
Diethylhydroxylamine (DEHA)	May be used for oxygen control.
Polyacrylic acid	Use as a dispersant.
Methoxypropylamine (MPA)	May be used for pH control.
Hydrogen peroxide	Hydrazine neutralizer.
Sodium hypochlorite	Used for macro-fouling control in service water.
Sodium bromide	Used for macro-fouling control in service water.
Sulfuric acid	Used for regeneration of resin beds.
Sodium hydroxide	Used for regeneration of resin beds.
CHEMICALS ADDED TO THE AUXILIARY HEATING BOILER	
Trisodium phosphate	Buffer/pH control.
Sodium sulfate	Oxygen control.
Sodium hydroxide	pH control.
Hydrazine	Oxygen control.
Carbohydrazide	May be used as a replacement for hydrazine.
Ammonium hydroxide	Formed in the system by hydrazine decomposition (pH control).
Monoethanolamine (ETA)	pH control.
CHEMICALS ADDED TO THE BEARING COOLING SYSTEM	
Sodium nitrite	Present in corrosion inhibitor.
Borax	Present in corrosion inhibitor.
Sodium molybdate	Present in corrosion inhibitor.
Metaborate	Present in corrosion inhibitor.
Tolytriazole	Present in corrosion inhibitor.
Potassium hydroxide	pH control.
Gluteraldehyde	Biocide.
Isothiazolone	Biocide.
CHEMICALS ADDED TO COMPONENT COOLING SYSTEM	

Potassium hydroxide	pH control.
Potassium chromate	Corrosion inhibitor.
Potassium dichromate	Corrosion inhibitor.
Sodium nitrite	May be used as a corrosion inhibitor.
Tolytriazole	May be used as a corrosion inhibitor.
Isothiazolone	May be used as a biocide.
Sodium tetraborate	May be used as a corrosion inhibitor.
Sodium molybdate	Corrosion inhibitor.
Gluteraldehyde	Biocide.

The above chemicals may appear in internal discharges at low concentrations. All would be below detection levels in the final discharge Outfall 001.

Periodically, checks for condenser leaks may be performed using uranine yellow dye (disodium flourescein) as an indicator. Concentrations used are in the range that would be perceptible only under UV light and would not be otherwise apparent in the cooling water discharge.

In addition to the above list, Surry Power Station uses numerous chemicals to operate and maintain its equipment, vehicles, and facilities. Examples of these chemicals include lubricants, cleaners, detergents, polishes, waxes, cleaners, cutting oils, sanitizers, paints, solvents, and protectants. The majority of these chemicals are managed in small containers but some are managed in larger quantities. It is conceivable that these chemicals and chemical types could appear in discharges from the Surry Power Station at very low concentrations.

ITEM VII: BIOLOGICAL TOXICITY TESTING DATA

The current VPDES permit for the Surry Power Station requires annual chronic whole effluent toxicity (WET) testing of Outfall 001 using *Mysidopsis bahia*. The results of toxicity tests performed in accordance with these requirements are presented in the table below.

Whole Effluent Toxicity Data for Surry Power Station Outfall 001 generated under current VPDES permit.			
Date (mo/yr)	NOEC (% Effluent)		
	Survival	Growth	Fecundity
June 2005	100	100	100
June 2004	100	100	NA
July 2003	100	100	NA
May 2002	100	100	100
January 2002	100	6	100
January 2002	100	100	100

All testing was performed by Coastal Bioanalysts, Inc., 6400 Enterprise Court, Gloucester, VA 23061, using DEQ-approved test procedures. All acute and chronic toxicity test results were within the toxicity acceptance criterion described in the permit except for the NOEC of 6 % for the growth endpoint determined for a chronic test performed early in January 2002. A retest was performed later that same month and yielded NOECs of 100% for all three test endpoints. We believe that the NOEC of 6% resulted from test sensitivity, and was not the result of effluent toxicity. A detailed discussion of the basis for this conclusion was presented to the DEQ with the results of the January tests.

ITEM VIII: CONTRACT ANALYSIS INFORMATION

Primary Laboratories, Inc.
2087 Dabney Road
Richmond, VA 23230

Florida Radiochemistry Services, Inc.
5456 Hoffner Ave
Suite 201
Orlando, FLA 32812

Albion Environmental
College Station, TX 77845

Primary Laboratories, Inc. performed the following chemical analyses, the results of which are included in Part V of this application.

- Cyanide
- Fecal coliform

Florida Radiochemistry Services, Inc. performed all analyses for radionuclides.

Albion Environmental measured mercury in November 2004 samples from Outfall 001. The analyses were performed using EPA Method 1631.

All other analyses were performed by our Dominion Laboratory and/or Surry Power Station's Laboratory, and in the case of field measurements by Dominion biologists and chemists.

ADDENDUM TO SEWAGE SLUDGE PERMIT APPLICATION

SECTION A.5

Please see the topographic map and aerial photograph provided with this submittal. Sewage sludge is generated at the station's STP. It is not stored, treated, or disposed of on-site.

SECTION A.6

Sewage sludge generated by the Surry Power Station is hauled offsite by a contractor, Duck's Septage Company (DSC), and is placed into an aerated septage lagoon that is operated by DSC. The sludge is not sold or given away for land application.

SECTION A.7.

The DSC septage lagoon is approved by the Virginia Health Department (VDH) and it is our understanding that the VDH does not issue permits for lagoons. However, permits have been issued for each of the four trucks that DCS uses to haul septage. The permit numbers for these trucks are as follows:

093-007, 146-005, 146-004, 146-002

FACILITY NAME: SURRY POWER STATION - STP
Yes No

VPDES PERMIT NUMBER: VA0004090

5. Sale or Give-Away in a Bag or Other Container for Application to the Land.

(Complete this question if you place sewage sludge in a bag or other container for sale or give-away prior to land application. Skip this question if sewage sludge is covered in Question 4.) NOT APPLICABLE

- a. Total dry metric tons per 365-day period of sewage sludge placed in a bag or other container at your facility for sale or give-away for application to the land: _____ dry metric tons
- b. Attach, with this application, a copy of all labels or notices that accompany the sewage sludge being sold or given away in a bag or other container for application to the land.

6. Shipment Off Site for Treatment or Blending.

(Complete this question if sewage sludge from your facility is sent to another facility that provides treatment or blending. This question does not apply to sewage sludge sent directly to a land application or surface disposal site. Skip this question if the sewage sludge is covered in Questions 4 or 5. If you send sewage sludge to more than one facility, attach additional sheets as necessary.)

- a. Receiving facility name: Duck's Septage Company
- b. Facility contact: Mr. Duck
Title: Owner
Phone: (757) 242-6657
- c. Mailing address:
Street or P.O. Box: 9330 Dinky Circle
City or Town: Windsor, VA State: VA Zip: 23487
- d. Total dry metric tons per 365-day period of sewage sludge provided to receiving facility: 3.86 dry metric tons
- e. List, on this form or an attachment, the receiving facility's VPDES permit number as well as the numbers of all other federal, state or local permits that regulate the receiving facility's sewage sludge use or disposal practices: SEE ATTACHMENT
Permit Number: _____ Type of Permit: _____
SEE ATTACHMENT
- f. Does the receiving facility provide additional treatment to reduce pathogens in sewage sludge from your facility? Yes No
Which class of pathogen reduction is achieved for the sewage sludge at the receiving facility?
Class A Class B Neither or unknown
Describe, on this form or another sheet of paper, any treatment processes used at the receiving facility to reduce pathogens in sewage sludge: NONE KNOWN
- g. Does the receiving facility provide additional treatment to reduce vector attraction characteristics of the sewage sludge? Yes No
Which vector attraction reduction option is met for the sewage sludge at the receiving facility?
Option 1 (Minimum 38 percent reduction in volatile solids)
Option 2 (Anaerobic process, with bench-scale demonstration)
Option 3 (Aerobic process, with bench-scale demonstration)
Option 4 (Specific oxygen uptake rate for aerobically digested sludge)
Option 5 (Aerobic processes plus raised temperature)
Option 6 (Raise pH to 12 and retain at 11.5)
Option 7 (75 percent solids with no unstabilized solids)
Option 8 (90 percent solids with unstabilized solids)
None unknown
Describe, on this form or another sheet of paper, any treatment processes used at the receiving facility to reduce vector attraction properties of sewage sludge: _____
- h. Does the receiving facility provide any additional treatment or blending not identified in f or g above?
Yes No
If yes, describe, on this form or another sheet of paper, the treatment processes not identified in f or g above:
The sludge is placed in an aerated lagoon
- i. If you answered yes to f., g or h above, attach a copy of any information you provide to the receiving facility

Please print or type in the unshaded areas only.

117	36	10	1	76	41	50	James River via Discharge Canal

II. FLOWS, SOURCES OF POLLUTION, AND TREATMENT TECHNOLOGIES

A. Attach a line drawing showing the water flow through the facility. Indicate sources of intake water, operations contributing wastewater to the effluent, and treatment units labeled to correspond to the more detailed descriptions in Item B. Construct a water balance on the line drawing by showing average flows between intakes, operations, treatment units, and outfalls. If a water balance cannot be determined (e.g., for certain mining activities), provide a pictorial description of the nature and amount of any sources of water and any collection or treatment measures.

B. For each outfall, provide a description of: (1) All operations contributing wastewater to the effluent, including process wastewater, sanitary wastewater, cooling water, and storm water runoff; (2) The average flow contributed by each operation; and (3) The treatment received by the wastewater. Continue on additional sheets if necessary.

III. PRODUCTION

A. Does an effluent guideline limitation promulgated by EPA under Section 304 of the Clean Water Act apply to your facility?

☒ YES (complete Item III-B)☐ NO (go to Section IV)

B. Are the limitations in the applicable effluent guideline expressed in terms of production (or other measure of operation)?

☐ YES (complete Item III-C)☒ NO (go to Section IV)

C. If you answered "yes" to Item III-B, list the quantity which represents an actual measurement of your level of production, expressed in the terms and units used in the applicable effluent guideline, and indicate the affected outfalls.

1. AVERAGE DAILY PRODUCTION

a. QUANTITY PER DAY	b. UNITS OF MEASURE	c. OPERATION, PRODUCT, MATERIAL, ETC. (specify)	2. AFFECTED OUTFALLS (list outfall numbers)

IV. IMPROVEMENTS

A. Are you now required by any Federal, State or local authority to meet any implementation schedule for the construction, upgrading or operation of wastewater treatment equipment or practices or any other environmental programs which may affect the discharges described in this application? This includes, but is not limited to, permit conditions, administrative or enforcement orders, enforcement compliance schedule letters, stipulations, court orders, and grant or loan conditions.

☐ YES (complete the following table)☒ NO (go to Item IV-B)

1. IDENTIFICATION OF CONDITION, AGREEMENT, ETC.	2. AFFECTED OUTFALLS		3. BRIEF DESCRIPTION OF PROJECT	4. FINAL COM- PLIANCE DATE	
	a. NO.	b. SOURCE OF DISCHARGE		a. RE- QUIRED	b. PRO- JECTED

B. OPTIONAL: You may attach additional sheets describing any additional water pollution control programs (or other environmental projects which may affect your discharges) you now have underway or which you plan. Indicate whether each program is now underway or planned, and indicate your actual or planned schedules for construction. ☐ MARK "X" IF DESCRIPTION OF ADDITIONAL CONTROL PROGRAMS IS ATTACHED

III. PRODUCTION

A. Does an effluent guideline limitation promulgated by EPA under Section 304 of the Clean Water Act apply to your facility?

☒ YES (complete Item III-B)

☐ NO (go to Section IV)

B. Are the limitations in the applicable effluent guideline expressed in terms of production (or other measure of operation)?

☐ YES (complete Item III-C)

☒ NO (go to Section IV)

C. If you answered "yes" to Item III-B, list the quantity which represents an actual measurement of your level of production, expressed in the terms and units used in the applicable effluent guideline, and indicate the affected outfalls.

1. AVERAGE DAILY PRODUCTION

a. QUANTITY PER DAY	b. UNITS OF MEASURE	c. OPERATION, PRODUCT, MATERIAL, ETC. (specify)	2. AFFECTED OUTFALLS (list outfall numbers)

IV. IMPROVEMENTS

A. Are you now required by any Federal, State or local authority to meet any implementation schedule for the construction, upgrading or operation of wastewater treatment equipment or practices or any other environmental programs which may affect the discharges described in this application? This includes, but is not limited to, permit conditions, administrative or enforcement orders, enforcement compliance schedule letters, stipulations, court orders, and grant or loan conditions.

☐ YES (complete the following table)

☒ NO (go to Item IV-B)

1. IDENTIFICATION OF CONDITION, AGREEMENT, ETC.	2. AFFECTED OUTFALLS		3. BRIEF DESCRIPTION OF PROJECT	4. FINAL COM- PLIANCE DATE	
	a. NO.	b. SOURCE OF DISCHARGE		a. RE- QUIRED	b. PRO- JECTED

B. OPTIONAL: You may attach additional sheets describing any additional water pollution control programs (or other environmental projects which may affect your discharges) you now have underway or which you plan. Indicate whether each program is now underway or planned, and indicate your actual or planned schedules for construction. ☐ MARK "X" IF DESCRIPTION OF ADDITIONAL CONTROL PROGRAMS IS ATTACHED

CONTINUED FROM PAGE 2

V. INTAKE AND EFFLUENT CHARACTERISTICS

A, B, & C: See instructions before proceeding — Complete one set of tables for each outfall — Annotate the outfall number in the space provided.
NOTE: Tables V-A, V-B, and V-C are included on separate sheets numbered V-1 through V-9.

D. Use the space below to list any of the pollutants listed in Table 2c-3 of the instructions, which you know or have reason to believe is discharged or may be discharged from any outfall. For every pollutant you list, briefly describe the reasons you believe it to be present and report any analytical data in your possession.

1. POLLUTANT	2. SOURCE	1. POLLUTANT	2. SOURCE
Dimethylamine Monoethanolamine Trimethylamine See Addendum to Form 2C for additional information.	Used in steam generators/secondary systems. Monoethanolamine also used in aux. boiler		

VI. POTENTIAL DISCHARGES NOT COVERED BY ANALYSIS

Is any pollutant listed in Item V-C a substance or a component of a substance which you currently use or manufacture as an intermediate or final product or byproduct?

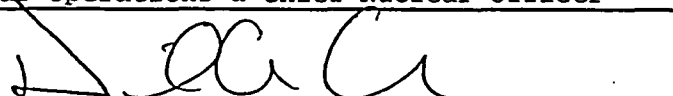

☐ YES (list all such pollutants below)

☒ NO (go to Item VI-B)

See addendum for additional information concerning chemical usage at the
Surry Power Station.

VII. BIOLOGICAL TOXICITY TESTING DATA	
Do you have any knowledge or reason to believe that any biological test for acute or chronic toxicity has been made on any of your discharges or on a receiving water in relation to your discharge within the last 3 years?	
<input checked="" type="checkbox"/> YES (identify the test(s) and describe their purposes below) <input type="checkbox"/> NO (go to Section VIII)	
<p>Annual chronic toxicity testing of Outfall 001 using Mysisidopsis bahia has been performed in accordance with the current VPDES permit. These results have been previously submitted to the DEQ and are available upon request. Please see the addendum for additional information.</p>	

VIII. CONTRACT ANALYSIS INFORMATION			
Were any of the analyses reported in Item V performed by a contract laboratory or consulting firm?			
<input checked="" type="checkbox"/> YES (list the name, address, and telephone number of, and pollutants analyzed by, each such laboratory or firm below) <input type="checkbox"/> NO (go to Section IX)			
A. NAME	B. ADDRESS	C. TELEPHONE (area code & no.)	D. POLLUTANTS ANALYZED (list)
Primary Laboratories	2087 Dabney Road Richmond, VA 23230	(804) 213-0831	Cyanide, Fecal Coliform
Florida Radiochemistry Services, Inc.	5456 Hoffner Ave Suite 201 Orlando, FLA 32812	(407) 382-7733	Radionuclides
Albion Environmental	College Station, TX 77845	(409) 693-8885	Mercury

IX. CERTIFICATION	
I certify under penalty of law that this document and all attachments were prepared under my direction or supervision in accordance with a system designed to assure that qualified personnel properly gather and evaluate the information submitted. Based on my inquiry of the person or persons who manage the system or those persons directly responsible for gathering the information, the information submitted is, to the best of my knowledge and belief, true, accurate, and complete. I am aware that there are significant penalties for submitting false information, including the possibility of fine and imprisonment for knowing violations.	
A. NAME & OFFICIAL TITLE (type or print)	B. PHONE NO. (area code & no.)
D.A. Christian, Sr. V.P. Nuclear Operations & Chief Nuclear Officer	(804) 273-3586
C. SIGNATURE	D. DATE SIGNED
	5-1-06

V. INTAKE AND EFFLUENT CHARACTERISTICS (CONTINUED FROM PAGE 3 OF FORM 2C)

OUTFALL 001
