## Indian Point Energy Center Status Report

May 16, 2006

### Operational Status – 2R17 Outage

Indian Point Unit 2 went into Mode 4 Hot standby on Sunday and remains in Mode 4 awaiting heatup of the system. The unit should be in MODE 3 later tonight. Maintenance crews are conducting post maintenance testing of systems and components repaired during the outage including recirculation pumps, main generator and turbine. The Vapor Containment equipment hatch is closed with the air lock repositioned in the hatch.

*At left, operators conduct inspections of the weld channels in the Vapor containment*

*Below, workers are checking on the condensate long loop recirculation valves.*

*Concrete shield blocks have been replaced inside the containment. The concrete shield blocks protect equipment. The large steel structure is a steam generator; next to and behind the generator is the Pressurizer.*

Unit 3 is  
ng at 100%  
power and has been on-line for 224 days.

operati  
reactor

**Ground water Investigation Update**

As a follow up to the chemical analyses conducted on the Unit 1 containment spray sump, Entergy continues to sample additional wells near Unit one and the sump for the presence of PCBs. To date, only one sample showed very trace levels of PCB's at .12 ppb. Radiochemistry samples have not yet been analyzed.
