

JANUARY 8, 2004

R2/E69

Westinghouse

All areas of the plant were able to be brought back online after the holidays with no significant issues. The process was shutdown Friday (19th) until the morning of the 5th. Only a skeleton crew was present for the 24th, 25th, and 1st. Maintenance activities were performed for the period of extended shutdown. Part of the maintenance activities was the refurbishment of equipment and concrete pads. The remaining waste materials from the work created a backlog of Low Level Radioactive Waste (LLRW) material that the facility needs to process. Several pads of the material are stored about the facility.
