Colonel Loring,

If you find that you need to list more radionuclides than those in Items C-F, you may also request that the Type C Broad License limits for your research use. The license condition would read:

A. If only one radionuclide is possessed, the possession limit is the quantity specified for that radionuclide in 10 CFR 33.100, Schedule A, Column II. If two or more radionuclides are possessed, the possession limit is determined as follows: For each radionuclide, determine the ratio of the quantity possessed to the applicable quantity specified in 10 CFR 33.100, Schedule A, Column II, for that radionuclide. The sum of the ratios for all radionuclides possessed under the license shall not exceed unity.

B. Notwithstanding Paragraph A of this Condition and 10 CFR 33.100, Schedule A, Column II, the applicable quantities for the following radionuclides are reduced to:

Carbon 14 100 millicuries  
Krypton 85 100 millicuries  
Iodine 129 10 microcuries

Any byproduct material other than alpha-emitting byproduct material not listed in 10 CFR 33.100, Schedule A 100 microcuries

Note: This condition restricts the possession limit for a Type C Broad License to eliminate the need for financial assurance for decommissioning.
